There are three positions on the product page where you can place a banner:

- **Top Banner** is placed on top of the product page, on the screenshot above this position is marked **1**.
- **Product label (ribbon)** is added to a product image as a label, like it's pictured on the screenshot, position **2**.
- **After Product Description Banner** is placed right after the product description or instead of it if description is absent. On the screenshot above this position is marked **3**.

For banners in positions **1** and **3** you can set **Alt** text which is displayed when image loading is disabled, **On Hover Text** which will be displayed when mouse pointer is moved above the banner, **Link** which will open specified URL when banner is clicked and finally **Description** field where you set the text which will be displayed above banner.

With **Show Banner for** setting you can set to display banner on all product pages with **All products** option, or you can make the banner display on specific products or products from specific categories.

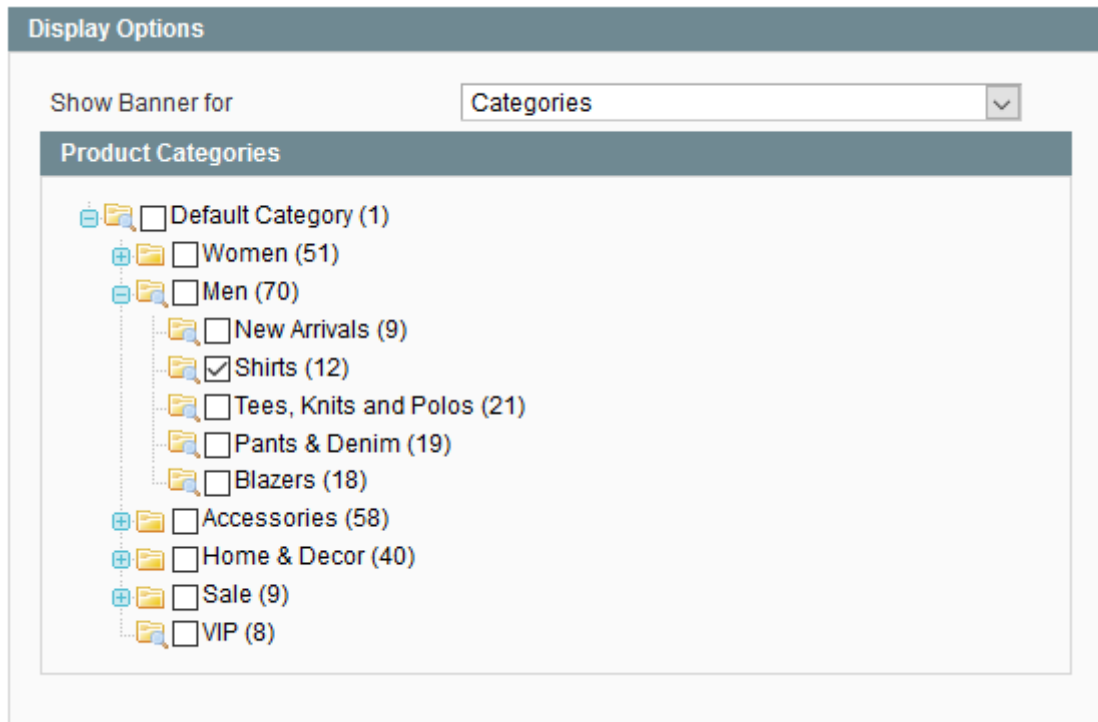

Display Options

Extension settings

Promo Banners Lite

Product Page Banners

Enable Top Banners	<input type="text" value="Yes"/>
Enable After Product Description Banner	<input type="text" value="Yes"/>
Show One Banner Only	<input type="text" value="Yes"/>

▲ Please select 'No' to show all banners from matched rules.

Gift Images

Gift Image Width (px)	<input type="text" value="50"/>
Gift Image Height (px)	<input type="text" value="50"/>
Product Attribute for Header	<input type="text" value="Name"/>
Product Attribute for Description	<input type="text" value="Short Description"/>

Enable Top Banners - controls **Top Banner** position, can be enabled or disabled store-wise.

Enable After Product Description Banner- controls **After Product Description Banner** position, can be enabled or disabled store-wise.

Show One Banner Only - when disabled, banners from different rules will stack up on the product page if there are multiple rules with banners applied. Enabled will show only the banner from the rule with highest priority.

Gift Image Width/Height (px) - set the necessary gift image parameters in pixels.

Product Attribute for Header - specify the value of a product to be displayed in the header.

Product Attribute for Description - select the attribute to be displayed in the description section.

GeoIP Database Installation

The module requires GeoIP database to be installed in order to detect users' location. Please go to **System → Configuration → Amasty Extensions → Geo IP Data**.

- var/amasty/geoip/GeoLite2-City-Blocks-IPv6.csv ✖
- var/amasty/geoip/GeoLite2-City-Locations-en.csv ✖

Import Completed

Databases are required for the correct work of the module. Also you need to install [php bcmath](#) or [gmp](#) extension on your server.

You can get the databases automatically or import your own data.

Hit the **Download and Import** button to make the extension download the updated CSV dump file and import it into your database automatically.

To import the files from your own source, use the **Import** option. Path to the files should look like this (the part 'var/amasty' should be replaced with your folders' names):

```
var/amasty/geoip/GeoLite2-City-Blocks-IPv4.csv  
var/amasty/geoip/GeoLite2-City-Blocks-IPv6.csv  
var/amasty/geoip/GeoLite2-City-Locations-en.csv
```

In the Import section, the **Import** button is grayed out by default. It will be available right after you upload the CSV files. The red error notification will switch to green success notification when the import is completed.
