

amasty

For more details see how the [Amasty Improved Sorting for Magento 2](#) extension works.

Guide for Improved Sorting for Magento 2

An effective tool for customer care. Improve the usability of your store catalog with user-friendly search options. The module allows your potential customers to browse catalog or categories by any parameters they need: best-sellers, most viewed, top-rated, new and in a wishlist.

- Offer suitable sorting options
- Enable users to view products by *Best Sellers*, *Top Rated*, *Most Viewed* and etc.
- Focus on better performing products
- Set out-of-stock products and items with no image to display at the end
- Change sorting order if you need
- Add featured products blocks to any page

The extension is fully compatible with **Magento Elasticsearch**. See how to install and configure the Elasticsearch engine [here](#).

This extension is available as a part of the Elastic Search Premium module. [Check the configuration options here](#) →

Steps to configure Improved Sorting

General Settings

To configure the module, go to **Stores** → **Configuration** → **Amasty Extensions** → **Improved Sorting**.

General

Disable Sorting By
[global]

- Best Sellers
- Top Rated
- Most Viewed
- Price
- Biggest Saving
- Reviews Count
- Now in Wishlists
- Product Name**
- Position
- bestseller

Press CTRL+mouse to select multiple values. Bestsellers, Most Viewed & Wishlists use Index. Click [here](#) to configure category specific sorting options, select category and open the 'Display Settings'.

Disable Sorting By - exclude any of the sorting options if needed.

Sorting Order

Best Sellers
Top Rated
Most Viewed
Price
Biggest Saving
Reviews Count
New
Now in Wishlists
Product Name
Position
Price: low to high
Price: high to low

Sorting Order - Drag and drop sorting options in the order you want them to appear in the improved sorting drop-down for the customers.

Sort Attributes Descending by Default [store view]

Please select the attributes to have descending sorting for them by default. Not selected attributes will have ascending sorting. Press CTRL+mouse to select multiple values.

Please select the attributes to have **descending sorting for them by default**. Not selected attributes will have ascending sorting.

<p>Show Products without Images Last [store view]</p>	<p>Yes</p> <p>If it is not important, select `No` to optimize server resources usage.</p>
<p>Show `Out of Stock` Products Last [store view]</p>	<p>Yes</p> <p>If it is not important, select `No` to optimize server resources usage.</p>
<p>Use qty to determine if the product is `Out of Stock` [store view]</p>	<p>Yes</p> <p>Products with the qty < 1 will be shown last regardless of the stock label.</p>
<p>Enable debug mode [store view]</p>	<p>No</p>

Show Products without Images Last - show or hide products without images to effectively manage your products offering.

Show `Out of Stock` Products Last - choose the variant to optimize the position of the `Out of Stock` products.

Use qty to determine if the product is `Out of Stock` - enable this option to put products on the `out of stock` list automatically. Products with the qty < 1 will be shown last regardless of the stock label.

To get the products' sorting query for a particular page:

- enable Debug Mode
- add the GET parameter **amdebug=1** to the URL of the page you want to debug, as in **example.com/shirts/amdebug=1**
- sort page by any option
- look for **/var/log/system.log** file in the Magento folders
- in the end of the file, find a products' sorting query

Enable debug mode

Sorting by Default

To specify the default sorting for search and category pages, expand the **Sorting by Default** tab.

Sorting by Default

Default Sorting on Search Pages

First Sort by [store view] ▼

Then by [store view] ▼

Then by [store view] ▼

Default Sorting on Category Pages

First Sort by [store view] ▼
Synced with Configuration -> Catalog -> Catalog -> Storefront -> Product Listing Sort by

Then by [store view] ▼

Then by [store view] ▼

Set the main algorithm at first, and then 2 additional ones according to your needs. Due to the feature, you can sort products in the most efficient way and thus increase more sales.

Configure Sorting Options

Using the *Improved Sorting for Magento 2* extension, you can choose various additional attributes like 'Most Viewed', 'Bestsellers', etc. Note that even text attributes can be used for sorting. Please keep in mind that by using sorting by text, MySQL can process numerical entries (e.g. 20, 67, 1548, etc.) like text entries. In such cases, entry '67' will be considered as a bigger value one, compared to entry '200'

Newest

Label [store view]	<input type="text" value="New Arrivals"/>
Rename sorting option to match your own vision.	
Attribute Code for the Newest Sorting [store view]	<input type="text" value="Set Product as New from Date"/> ▼
Leave empty to use product creation date. If you indicate a custom attribute, make sure `Used in Product Listing` for the attribute is set to `Yes`.	

Newest - displays products in the order they were added to the website. If you would like to manage product order for this option by yourself, please, select a product attribute with the help of which you can specify the dates you need.

In cases when a product is configurable, the feature sorts by the value of the configurable product, not simple ones.

Label - specify a name of the sorting option you would like to be displayed on the frontend.

Attribute Code for the Newest Sorting - Leave empty to use product creation date. If you indicate a custom attribute, make sure `Used in Product Listing` for the attribute is set to `Yes`.

If you apply a custom attribute, the feature will sort by this custom attribute ONLY.

Bestsellers

Label
[store view]
Rename sorting option to match your own vision.

Bestsellers Period (days)
[global]
Leave empty for life-time statistics.

Custom Bestsellers Attribute
[store view] ▼
Use to artificially move some products up in the real best sellers list. Leave empty to show real data.

Exclude Orders Status
[global]

- Canceled
- Closed
- Complete
- Suspected Fraud
- On Hold
- Payment Review
- PayPal Canceled Reversal
- PayPal Reversed
- Pending
- Pending Payment

Products from orders with selected states will not be used in the Bestsellers.

Bestsellers - displays best-selling products according to the statistics.

Bestsellers Period (days) - sorting option will be counted for the period, indicated here. So if you indicate '15' here, sales for the last 15 days will be counted and the order of products for bestseller sorting option will be defined based on the count. Leave empty for lifetime statistics.

The field is validated by numbers. If you change the value, the index becomes invalid, that's why reindex is required.

Custom Bestsellers Attribute - select the custom bestseller attribute to move products up in the bestsellers list manually.

Exclude Orders Statuses - products with specified order statuses will not be used in Bestsellers.

Most viewed

Label [store view]	<input type="text" value="Popular"/>
Rename sorting option to match your own vision.	
Most Viewed Period (days) [global]	<input type="text" value="15"/>
Leave empty for life-time statistics.	
Custom Most Viewed Attribute [store view]	<input type="text" value="Special Price"/> ▼
Use to artificially move some products up in the real most viewed list. Leave empty to show real data.	

Most viewed - displays the products according to the number of views. This sorting option will be counted for the period, indicated the **Most Viewed Period (days)**. Don't forget to rename the sorting option to match your own vision.

Custom Most Viewed Attribute - use to artificially move some products up in the real most viewed list. Leave empty to show real data.

For the correct operation of the Most Viewed sorting Magento Reports should be enabled. Please navigate to: **Stores** → **Configuration** → **General** → **Reports**, than check that **Enable Reports** and **Enable Product View Report** settings are set to 'Yes'.

Biggest Saving

Label
[store view] Discounts

Rename sorting option to match your own vision.

Use Percentage for Biggest Saving Sorting
[store view] Yes

'Biggest Saving' - displays products with the biggest discount on the top of the list. You can use percentage or absolute values to show the difference between regular and special price. For example, you have products A & B. A costs \$100; there is a 10% discount on this product, so special price \$90.

Product B costs \$10, with a discount of 50% special price is \$5. If the 'Biggest Saving' list is sorted by percentage, product B (50% off) would be listed above the product A. If you choose to make sorting by absolute price values, product A will go before product B on the list.

Now in Wishlists

Label
[store view]

Rename sorting option to match your own vision.

Added to wishlist Period (days)
[global]

Leave empty for life-time statistics.

Now in Wishlists - sorting option displays products that were added by other customers to their wishlists. Put down the frontend name of the option in the 'Label' field and specify the data update period below.

Top Rated

Label
[store view]

Rename sorting option to match your own vision.

Top rated - this option shows high rated products at the top. In the 'Label' field put down the name of the option that is displayed on the frontend.

Reviews Count

Label
[store view]

Rename sorting option to match your own vision.

Price: high to low

Price: low to high

Reviews count - the option sort products by the number of reviews. Fill in the 'Label' field with a frontend name.

Price: high to low or low to high - this option sorts items by price differentiation. You can also customize the title of the option.

To let customers apply all sorting options to product lists generated by layered navigation, see **Improved Layered Navigation for Magento 2**.

Custom attributes for Bestsellers and Most Viewed

With the extension, you can artificially move some products up in the real bestsellers list.

To do this, please go to **Stores → Attributes → Product**.

★★★★★ 3 reviews
\$33.00

Savvy Shoulder Tote
★★★★★ 2 reviews
\$24.00 Regular Price
\$32.00

Compare Products

You have no items to compare.

But you want to display a Savvy Shoulder Tote first so that it could be sold out faster. So, you create a custom **bestseller** attribute and assign it to Bags attribute set.

Select the attribute code of a custom attribute in the general settings:

Bestsellers

Label
[store view]

Rename sorting option to match your own vision.

Bestsellers Period (days)
[global]

Leave empty for life-time statistics.

Custom Bestsellers Attribute
[store view]

Use to artificially move some products up in the real best sellers list. Leave empty to show real data.

Now find the necessary product and specify the value to improve its position.

Savvy Shoulder Tote

Store View: All Store Views ? [← Back](#) [Add Attribute](#) [Save](#)

Enable Product Yes
[website]

Attribute Set: Bag

Product Name * Savvy Shoulder Tote
[store view]

SKU * 24-WB05
[global]

Price * \$ 32.00
[global]

[Advanced Pricing](#)

bestseller \$ 30.00
[global]

Save the changes. Thus, the extension will display the products according to the value of this attribute. If the value is not specified, the products will be shown according to the real bestseller data.

Check the result on the frontend.

Compatibility with Yotpo Reviews. As well as with the Magento default reviews, you can use a 'Reviews Count' feature with popular Yotpo Reviews extension. Easily collect customer reviews and

then display them on site pages to help buyers with purchase decisions. Moreover, analyzing customers' feedback data you can continually optimize your web store to provide better customer experience and increase your store conversion.

The screenshot displays a product listing interface with a 'Sort By' dropdown menu open on the right. The menu includes options: Position, Best Sellers, Price, Price: low to high, Price: hgh to low, Top Rated, Most Viewed, Biggest Saving, **Reviews Count** (selected), New Arrivals, Now in Wishlists, and Product Name. Below the menu, three product cards are visible: 'Strike Endurance Tee' (\$39.00, 4 reviews), 'Deion Long-Sleeve' (\$39.00, 2 reviews), and 'Logan HeatTec Tee' (\$24.00, 1 review). A 'Reviews (2)' popup is overlaid on the left, showing two reviews: Rhonda F. (4 stars) and Justin B. (5 stars). The popup text for Rhonda F. reads: 'Cool Long-Sleeve. I got this for running, but the fit is kind of funny so I just end up wearing it for yard work. It's light enough, just nothing special.' The popup text for Justin B. reads: 'Nice and light. Nice and light. I like that there's no obnoxious design.'

Boost your most popular products to sell even better with **Featured Products Block**.

Here, you can see all the existing cron tasks and their statuses. Run cron tasks and generate their schedule by clicking the 'Run Cron' button. Also, delete tasks in bulk, apply filtering and sorting options when it is needed.

Index management

To manage indexers and see their current status, please, go to **System → Index Management**

To manage sorting indexer modes for sorting options like 'Bestsellers', 'Most Viewed' and 'Wishlists', click the **'Actions'** button.

If the sorting is disabled by any value (see 'General Settings' - 'Disabled sorting by'), the status is 'Reindex Required' but reindex doesn't perform.

'Update by Save' mode means that the index is refreshed automatically once per day at 3 a.m.

'Update by Schedule' means that the index refreshes according to your cron and reindex performs when the index becomes invalid.

Index Management

records found (3 selected)

Actions	Description	Mode	Status
Update on Save	Amasty Improved Sorting - Bestsellers	UPDATE ON SAVE	REINDEX REQUIRED
Update by Schedule	Amasty Improved Sorting - Most Viewed	UPDATE ON SAVE	REINDEX REQUIRED
