

**amasty**

For more details see how the [Improved Layered Navigation](#) extension works.

# Guide for Improved Layered Navigation for Magento 2 (settings)

With a feature-rich navigation module, you will easily enhance customer shopping experience by adding a handy vertical and horizontal navigation menu to your website. Filter store catalog by any product attribute, display price sliders and 'from-to widgets'. Generate custom brand pages and optimize your website for search engines.

- Configure multiple store filters to meet your specific need;
- Auto generate SEO-friendly page URLs;
- Display a 'Brand' filter;
- Use AJAX technology to streamline product filtering;

**NOTE:** Amasty has launched the new [Elastic Search for Magento 2](#) extension that can principally quicken your catalog.

## UPGRADE THE SEARCH IN YOUR STORE WITH A NEW **ELASTIC SEARCH** MODULE

Let your shoppers partially search by any type of data (by SKU, product name, or any other attributes) and get the most relevant search results.

The extension optimizes a search performance and smooths customers' browsing greatly:

- Autocomplete suggestions & spell corrections
- Partial search by SKU, name, attributes
- Product attribute weight settings
- Synonyms & stop words
- Multi-lingual search

The extension is **read compatible with GraphQL**. Now you can expose the datasets in Improved Layered Navigation for Magento 2 via GraphQL queries.

---

# General Settings

Magento highly recommends to deploy static content after the extension installation.

To get access to Magento 2 layered navigation settings, please go to **Stores → Configuration → Improved Layered Navigation**

## General

**Enable Ajax** [store view] Yes

For the 'By button click' mode AJAX keeps working no matter which option is selected

**Scroll to Top after AJAX Load** [store view] Yes (to Listing Top)

**Add Vertical Scrolling to Filter Block After** [store view] 300

Set maximum box height in px, to disable enter 0

**Submit Filters on Desktop** [store view] Instantly

**Submit Filters on Mobile** [store view] Instantly

**Leave the Single-Select Filter Visible after Selection** [store view] No

**Number of Unfolded Options in State** [store view] 0

Other options will be shown after a customer clicks the "More" button.

**Slider Style** [store view] Improved 

**Exclude 'Out of Stock' Configurable Options from Navigation** [global] No

Parent configurable products won't be displayed in the results when filtered by an out of stock option. This setting will exclude such products from search results as well.

## How to apply filters on Desktop/Mobile with Varnish

If you need different types of cache for mobile and desktop devices, please, insert this code (line 2-8) into the section `vcl_hash` in the varnish configuration file (`vcl`).

```
sub vcl_hash {
    if (req.http.X-UA-Device ~ "^mobile"
        || req.http.X-UA-device ~ "^tablet"
    ) {
        hash_data("mobile");
    }
}
```

```
} else {  
    hash_data("desktop");  
}  
}
```

**Enable AJAX** - Enable AJAX to avoid page reloads.

Customers can continue selecting multiple filter options while it's loading with AJAX. This way the whole shopping process becomes seamless and fast.

Lee Cooper Gradient Jacket Mens <b>\$89.00</b>	Umbro Republic of Ireland Pro Training Shower Jacket <b>\$35.00</b>	Converse Four Star T S <b>\$12.00</b>

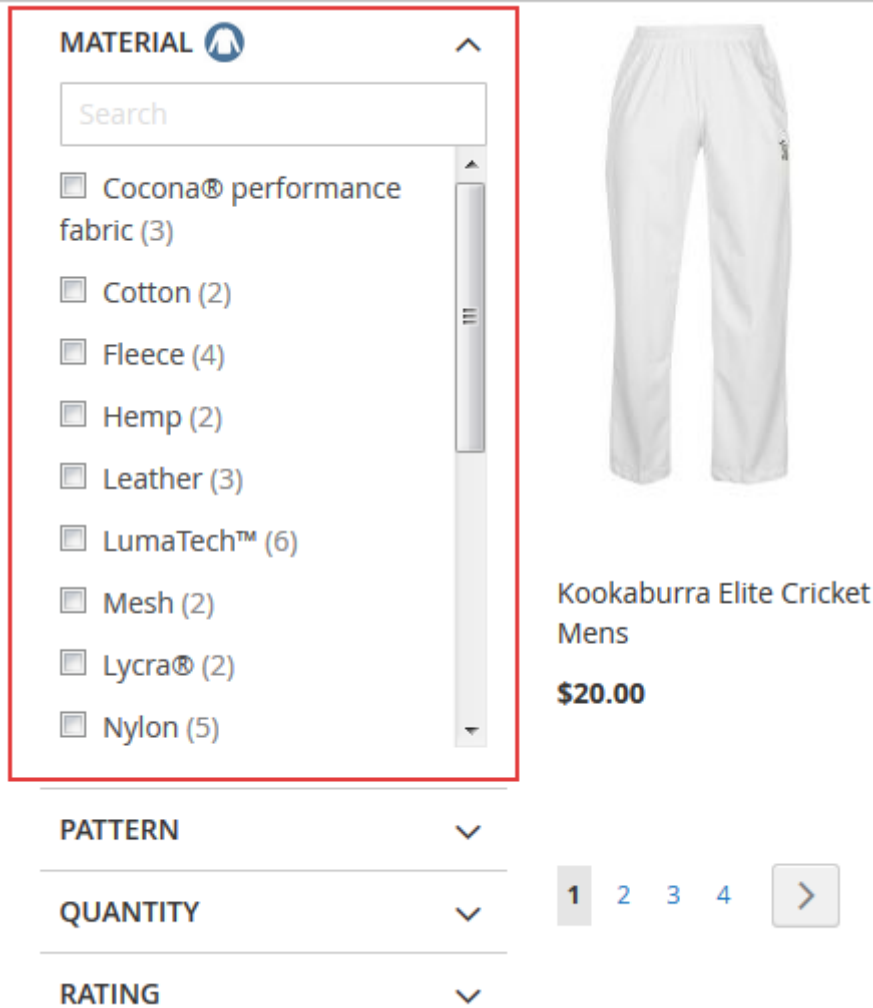

**Scroll to Top after AJAX Load** - With this setting, you can enable an option of scrolling to the top after filter applying by ajax. You can choose one of the three options:

- Yes (to Listing Top)
- Yes (to Page Top)
- No

**Add Vertical Scrolling to Filter Block After** - Specify maximal filter size (in pixels) that will be

displayed without vertical scrolling. In case a filter is higher than the indicated size, the scrolling will appear.

See a **Vertical Scroll** example

The screenshot shows a product page for 'Kookaburra Elite Cricket Mens' priced at '\$20.00'. A filter for 'MATERIAL' is open, displaying a search bar and a list of material options with their respective counts: Cocona® performance fabric (3), Cotton (2), Fleece (4), Hemp (2), Leather (3), LumaTech™ (6), Mesh (2), Lycra® (2), and Nylon (5). The filter is highlighted with a red border. Below the filter, there are sections for 'PATTERN', 'QUANTITY', and 'RATING', each with a dropdown arrow. To the right of these sections is a pagination control showing '1 2 3 4' and a right arrow button.

**Submit filters on desktop (on mobile)** - Select *Instantly* mode to apply filters one by one, on the fly. With the *By Button Click* mode, customers will be able to apply multiple filters in bulk after clicking an *Apply* button.

**By Button Click** mode sample

**Leave the Single-Select Filter Visible after Selection** - Disable the setting to hide the filter when the value is selected.

**How it works:**

If the setting is set to No, the option with the only one choice will become hidden after the selection:

**Number of Unfolded Options in State** - Specify the number of unfolded options. To see other options, a customer should click the 'More' button.

**Slider Style** - Here you can choose the style for a Price Slider. There are 5 options available for now: Default, Improved, Volumetric Gradient, Light, Dark.

Scroll to Top after AJAX Load <small>[store view]</small>	Yes
Add Vertical Scrolling to Filter Block After <small>[store view]</small>	300 <small>Set maximum box height in px</small>
Submit Filters on Desktop <small>[store view]</small>	Instantly
Submit Filters on Mobile <small>[store view]</small>	Instantly
Leave the Single-Select Filter Visible after Selection <small>[store view]</small>	No
Number of Unfolded Options in State <small>[store view]</small>	0 <small>Other options will be shown after "More" button.</small>
Slider Style <small>[store view]</small>	Volumetric Gradient <span>?</span>

**Exclude 'Out of Stock' Configurable Options from Navigation** - Set to 'Yes' to hide out-of-stock configurable products options and parent configurable products from the search results if the configurable products don't have an option by which the filtering went.

### Add Title, Description and CMS Blocks of the Selected Filters

Here you can customize and add Magento 2 category attributes like title and description.

## Add Title, Description and CMS Blocks of the Selected Filters

Title, Description and CMS blocks of the applied filters will be added to the category and brand pages.

### Add the title & description of the selected filters

[store view]

The title & description of the applied filters will be added to the category and brand pages

### Add Filter Title

[store view]

### Separate Category Name & Title with

[store view]

### Add Filter Description

[store view]

### Replace Category Image

[store view]

Category Image will be replaced if filter option have custom image uploaded.

### Replace Category CMS Block

[store view]

Category CMS Block will be replaced if filter option has custom Top CMS Block defined.

**Add the title & description of the selected filters** - specify any filters to which you want to apply custom title and description.

Check the frontend sample of a customized title:

Tooltip	<p>Luma Theme</p> <input type="text" value="All material types are a"/>

**Display Mode** - Specify how to display filters - as *Labels*, *Images*, *Images & Labels*, *Text Swatches*.

**Show in the Block** - Specify whether to show the filter in a vertical or horizontal navigation. It's also possible to show filters in both blocks.

**Sort Options By** - Specify which way you would like to sort the options: by name or by position.

**Show Product Quantities** - Set whether to display or not the product quantities with the filter options.

**Show Search Box** - Set to 'Yes' to show a search box in a filter. It is very convenient for filters with many options.

**Show the search box if the number of options more than** - Indicate the number of options required to display the search box in a filter.

**Number of Unfolded Options** - Specify the number of unfolded filter values that will be shown to customers when they click on a specific filter.

**Expand** - The option allows to expand filter automatically right after a page is loaded. Set 'Expand for desktop only' to keep filter minimized on mobile. Keep 'Auto' to work based on the custom theme functionality.

Example: if we specify 2 unfolded values for display, other values will be shown after a customer clicks the *Show More* link.

**Tooltip** - Specify the tooltip text that will be displayed for a specific filter on mouse hover. You can set different tooltips text for particular store views.

An example of a tooltip icon and a text.

If you want to display only particular options in the filters, you should make them **Featured**.

- Go to **Stores → Product**
- Select a particular attribute
- In the *Properties* tab, go to *Manage Swatch (Values of Your Attribute)*
- Select a needed option, that you want to make featured
- Click on settings' gear icon in the option's section.

### Manage Swatch (Values of Your Attribute)

Is Default	Swatch	Admin	Default Store View	Store View 2	
<input checked="" type="radio"/>		Black			 
<input type="radio"/>		Blue			 
<input type="radio"/>		Brown			 
<input type="radio"/>		Gray			 

- Enable **Is Featured** option. Note, that not featured options will be hidden under 'show more' element if at least one attribute's option is marked as 'Is Featured'.

### Settings

Store View: All Store Views 

### Featured Options

Is Featured  [STORE VIEW]  
Not featured options will be hidden under 'show more' element (if at least one attribute's option is marked as 'Is Featured').

### SEO

URL alias  [STORE VIEW]

### Meta Data

- Adjust other featured option settings you need:

**Visible in Categories**

- Visible Everywhere
- Only in Selected Categories
- Hide in Selected Categories

**Show only when any option of attributes below is selected**

**Show only if the following option is selected**

- Travel
- Urban
- Brand**
- Adidas
- And1
- Converse

**Show Icon on the Product Page**

Upload images for your options to show them right after the product title

**Visible in categories** - Choose for which categories the filter will be available.

**Show only when one of the attributes below is selected** - choose filter attributes that will trigger the display of a dependent filter. You can select as many attributes as you need.

**Show only when one of the options below is selected** - choose the options that will trigger the display of the dependent filter.

**Show icon on the product page** - upload a special image that will be displayed on the product pages which meet filter requirements. This option is especially useful for a Brand filter to show a brand logo on the corresponding product pages.

**Filtering**

**Allow Multiselect**

**Multiple Values Logic**

- Show products with ANY value
- Show products with ALL values only

**Allow Multiselect** - Enable the option to let customers choose several values of the filter at a time.

**Multiple Values Logic** - There two options available:

- Show products with ANY value - all products containing at least one value from the selected ones will be displayed);
- Show products with ALL values - products that contain all select values will be displayed.

**Group Title** - Specify different titles for attributes' group for each view store individually.

**Group Code** - Specify a group code that will be used in the URL of the filter results page by default.

**Status** - Enable filter group on the frontend.

**Swatch** - Select the main thumbnail swatch for the whole group.

**Alias** - Specify a custom alias if necessary that will be used in the URL of the filter results page.

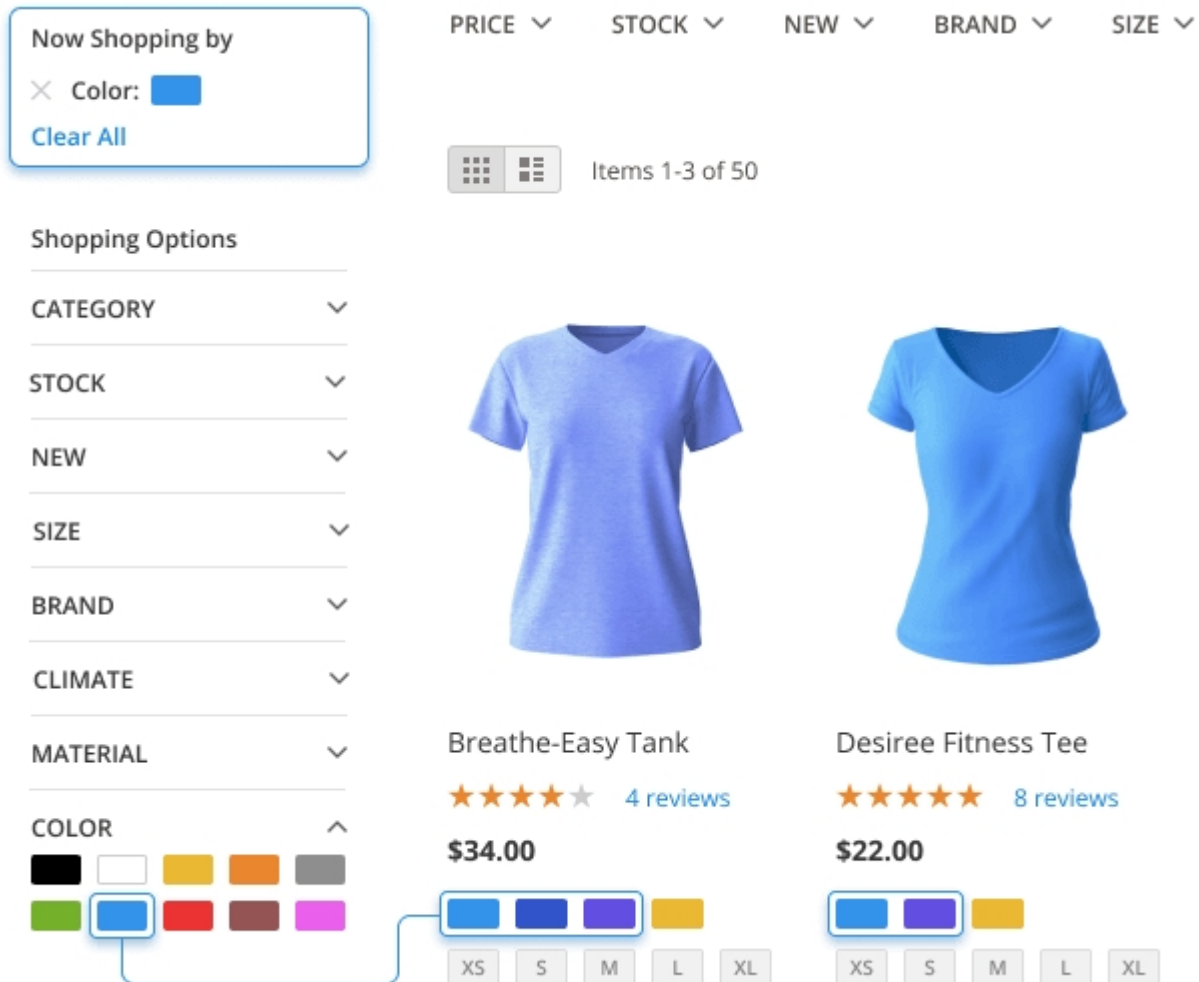

**Position** - Set the display position for your frontend filters block. This setting defines the position only among the Group Attribute Options (created within the same attribute). It doesn't affect the positioning of common attribute options in the filter.

**Attribute** - Select an attribute type for which you want to create a group.

**Attribute options** - Once the attribute is selected you'll see corresponding attribute options. Select

the ones that you want to gather in a group.

See the option in action. When a customer selects the icon of an attribute group ('Blue' for example), the module will display all products with the attributes from the 'Blue' group.

---

## Fine-Tuning Filters

Simple attribute filters are presented in Magento by design. They are derived from the attributes of **Catalog Input Type for Store Owner=Multiple Select**. An attribute becomes a filter, if there is a **Use in Layered Navigation** setting.

### Attribute Filters

**Available settings in the Display Properties section are the following:**

*(the specific for simple attribute-filters are highlighted)*

- **Display Mode (Labels / Images / Images & Labels)**
- **Show in the Block (Sidebar / Top / Both)**
- **Sort Options By** (Position / Name)
- Show Product Quantities
- **Show Search Box** (only in the *Labels* mode)
- **Number of unfolded options** (only in the *Labels* mode)
- Expand
- Tooltip
- Visible In Categories
- Show only when any option of attributes below is selected
- Show only if the following option is selected
- Show icon on the product page

**Show Search Box** adds a text field for the quick search under the options. It hides the options that don't correspond to the request.

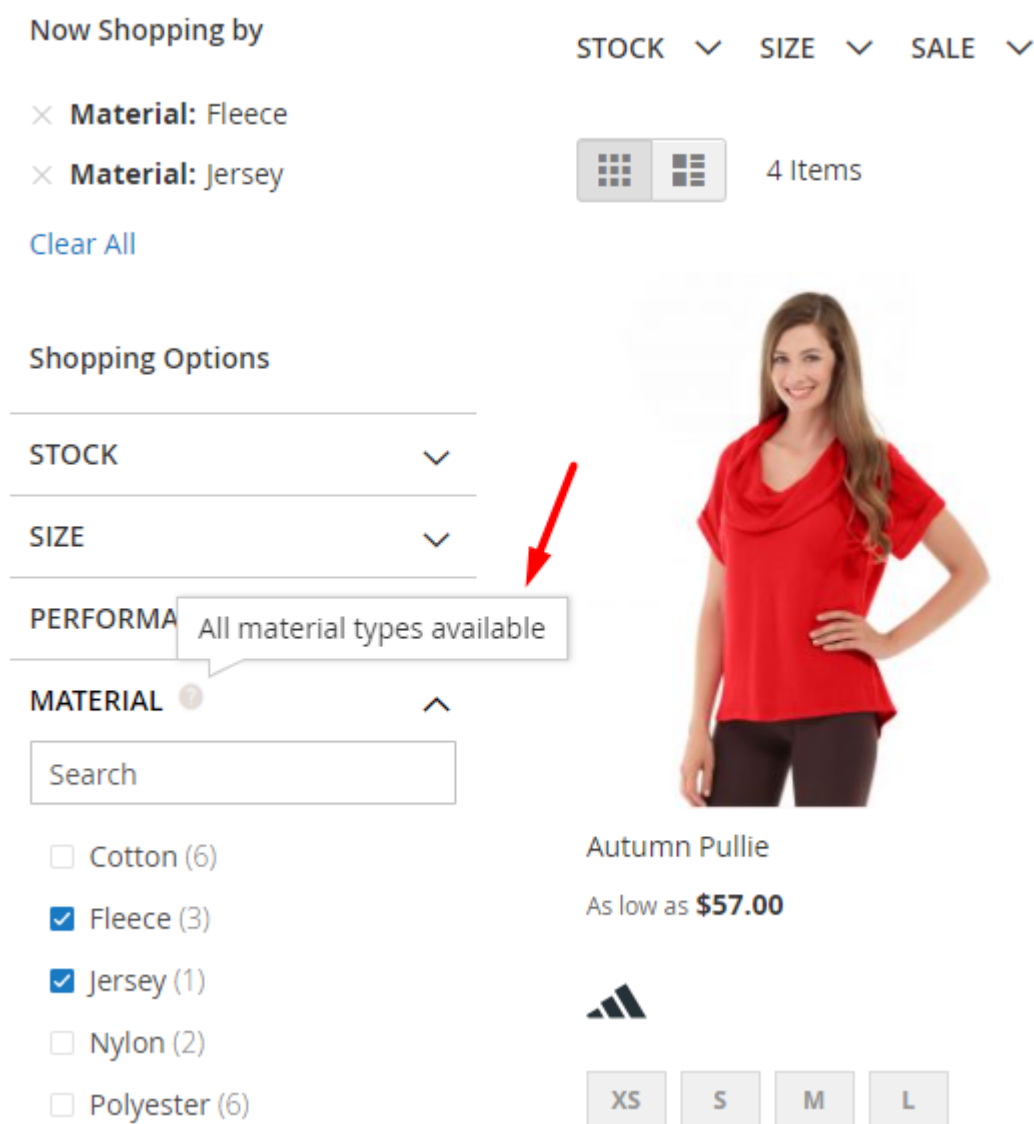

**Number of unfolded options** indicates options that will be displayed right after the page is loaded. The other options are hidden with the *Show more* button. This is useful, when there are many options.

**NOTE:** While filtering with *Search Box*, the *Number of unfolded options* option becomes timely unavailable and all the filter options become visible.

**Expand** - Expand filter right after a page is loaded. The setting may be helpful for the themes, where filters are hidden by default.

If a filter is applied, it will be expanded in any case, independently from this setting.

**Tooltip** - Add a pictogram to a filter. When you hover over a pictogram, a pop-up hint appears.

The screenshot displays a product page with layered navigation. At the top, there are filters for 'Now Shopping by' (Material: Fleece, Material: Jersey), 'STOCK', 'SIZE', and 'SALE'. Below these, there are icons for a grid and list view, and a '4 Items' indicator. A 'Clear All' link is also present. The 'Shopping Options' section includes 'STOCK', 'SIZE', 'PERFORMANCE', and 'MATERIAL' filters. A red arrow points to a tooltip that says 'All material types available' over the 'PERFORMANCE' filter. The 'MATERIAL' filter is expanded, showing a search box and a list of material options: Cotton (6), Fleece (3), Jersey (1), Nylon (2), and Polyester (6). To the right, a product image shows a woman wearing a red 'Autumn Pullie' top. Below the image, the product name 'Autumn Pullie' and price 'As low as \$57.00' are displayed, along with an Adidas logo and size selection buttons for XS, S, M, and L.

You can upload any pictogram to **Improved Layered Navigation - Tooltip**.

**Visible in Categories** - It defines what categories includes a filter.

**Show only when any option of attributes below is selected** - It allows to manage a correlation between one filter visibility and the several others. Thus, if you specify a few other attributes here, the filter will be visible only if one of the specified filters is used by a visitor.

**Show only if the following option is selected** - It allows to manage a correlation with other filters in more detail. Specify individual options of another filter, rather than a filter all-in-all.

**Available settings in the Filtering section:**

- Allow Multiselect
- Multiple Values Logic

**Multiple Values Logic - Show products with any values.** A product is selected, if at least one of the filter's options match with its attributes' values.

**Multiple Values Logic - Show products with ALL values only.** A product is selected, if all the filter's options match with its attributes' values.

## Filter SEO settings

For each filter you can find the following settings in the SEO section:

- Generate SEO URL
- Allow Google to INDEX the Category Page with the Filter Applied
- Allow Google to FOLLOW Links on the Category Page with the Filter Applied
- Add rel="nofollow" to filter links (Auto / No)
- Attribute URL Alias

**Generate SEO URL.** When you filter by this attribute, it removes the parameter from the *GET-request* and embeds it in the main part of the URL with *alias*, optimized for the search engines. For instance, *category/cotton.html* instead of *category.html?material=46*. It is active, if SEO URL generator is enabled in the general SEO settings.

**category/cotton.html** instead of **category.html?material=46**

**Allow Google to INDEX/FOLLOW the Category Page with the Filter Applied** - the option allows to block the indexing and prevent the search crawlers from going through links on the pages, where the filter is applied. It is implemented with the meta-tag robots. Active, when the option *Allow the Module to Modify Robots Meta Tag* is enabled in the *SEO general settings*.

**The exception:** the brand page is always *INDEX*, independently from the brand SEO settings. The other applied filters - if there are active - continue to affect robots. There are also some differences in performance with the *Robots* tag on the Custom Page.

**Add rel="nofollow" to filter links** allows to block the path to links that are unavailable by design. Thus it decreases the stress on a search robot. It is active, when the option **Automatically add rel="nofollow" to filter links when required** is enabled in the **SEO general settings**. You can disable this parameter, when the attribute takes part in the Custom Page formation. This will help the search robot reach the necessary page.

**Attribute URL Alias** - the option allows a store admin to set a custom URL alias for an attribute. If the field is left empty, the attribute code value will be used as an URL alias.

## Swatch Filters

The attributes from **Catalog Input Type for Store Owner = Visual Swatch / Text Swatch** in Magento are displayed in a particular way: as images or pictograms with texts. That is why, the kit of settings in Improved Navigation is different.

Available settings in the Display Properties section:

- Display Mode (Labels / **Images** / **Images & Labels** / **Text Swatches**)
- Show in the Block
- Sort Options By (Position / Name)
- Show Product Quantities (only for *Labels*, *Dropdown*, *Images & Labels* mode)
- Show Search Box (only for *Labels* and *Images & Labels*)
- Number of unfolded options (except *Dropdown* mode)
- Expand
- Tooltip
- Visible In Categories
- Show only when any option of attributes below is selected
- Show only if the following option is selected
- Show icon on the product page

The settings in the **Filtering** and **SEO** sections are identical to the settings for simple attributes.

## Manage Options

To manage filter options, go to **Admin panel** → **Stores** → **Attributes** → **Product** → **Attribute Information** → **Properties** → **Manage Options (Values of Your Attribute)** → Select an **option** → Click **Settings** button.

Here you can make the option **Featured** if needed. It is useful if you want to display only particular options in the filter. It is also possible to specify particular filter options to improve **SEO**. The following option settings are available:

- Meta Data (Meta Title, Meta Description, Meta Keywords)
- Page Content (Page Title, Description, Image, Top CMS Block)
- SEO (URL Alias)
- Other (Small Image, Small Image Alt)

# Settings

Store View: All Store Views ?

## Featured Options

## Page Content

Page Title  [STORE VIEW]  Use Default Value

Description  [STORE VIEW]

Image  No file chosen [STORE VIEW]

Top CMS Block  [STORE VIEW]

Bottom CMS Block  [STORE VIEW]

## Other

Small Image  No file chosen [STORE VIEW]

Small Image Alt  [STORE VIEW]

**Meta Data and Page Content** are added to the page according to the settings specified in the sections **Improved Layered Navigation > Category Title** and **Description Improved Layered**

**Navigation > Category Meta Tags.** It is added, when you filter products by particular option. Also these settings are applied on the page of the appropriate brand, replacing data set by default.

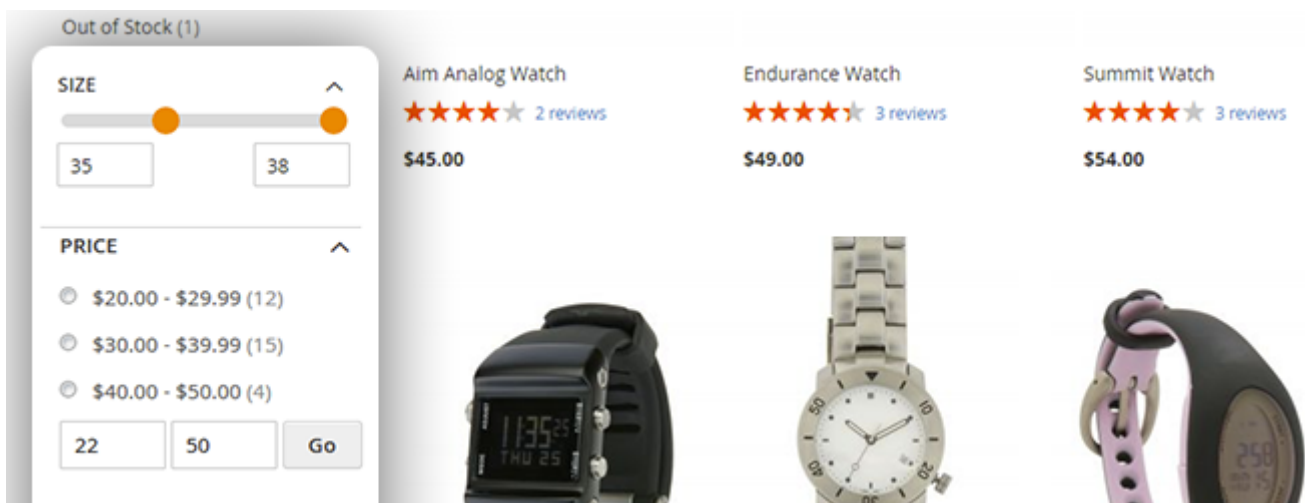

Improved Layered Navigation automatically generates **URL Alias** for the filter options. To enable this, leave an empty field.

Please, consider: if you change this setting, the prior urls will become unavailable.

## Price & Decimal

**Price & Decimal** are filters that are featured in Magento by design.

**Decimal** is any attribute of the price type, except the price itself. **Decimal** attributes are often used to store the values, that don't relate to the price (e.g., *size, length, weight, etc*). This is convenient, as far as you can specify any arbitrary values in decimals, rather than selecting them from variants.

The multiselect is not available for price and decimal filters.

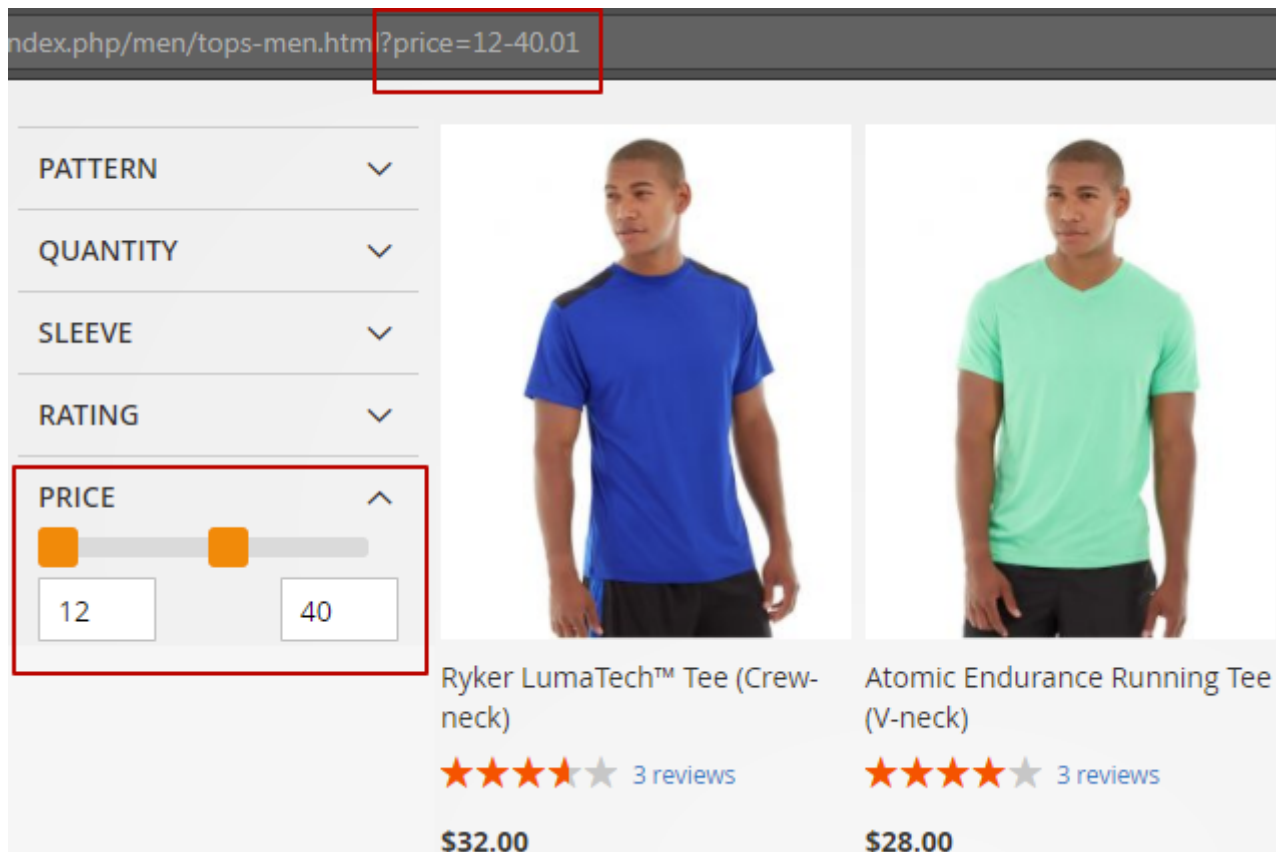

## Available SEO Settings

**SEO URL** is not available, as *Price* and *Decimal* attributes are added to the URL as a GET parameter: **category.html?price=100-200**

If the filter is applied, then the robots tag takes the value *"noindex, nofollow"* (if **Allow the Module to Modify Robots Meta Tag** is enabled in the SEO settings). Accordingly, direct links to filtering should have the attribute *rel="nofollow"* (if **Automatically add rel="nofollow" to filter links when required** is enabled in the SEO settings)

Magento forms price intervals, including the lower limit and excluding the upper one, for one product does not fall into several intervals at the same time. For example, the interval in the filter is specified as 40.00-49.99, the same interval is also specified in the block **Currently Shopping By**. Although, in the URL, the upper limit is extended by 0.01 (price = 40-50). If the filtering is done using a slider, or *from-to widget*, then the products must include products that match the end points as well. For this purpose, in case the visitor filters using a slider or *from-to widget*, the extension adds 0.01 to the top

border (into the URL) to neutralize the Magento's correction by default.

### Multiple Currencies

If a store's currency differs from the base currency, the values are recalculated according to the rates only for the Price filter, but not for Decimal.

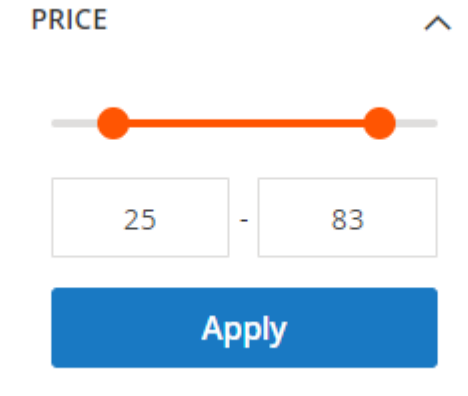

### Available settings in the Display Properties section:

*(the specific ones for Price and Decimal filters are highlighted)*

- **Display Mode** (Ranges / Dropdown (Deprecated) / Slider / From-To Only)
- **Add From-To Widget** (except From-To Only)
- **Minimum Slider Value** (only for Slider mode)
- **Maximum Slider Value** (only for Slider mode)
- **Slider Step** (only for Slider mode)
- **Measure Units** (Store Currency / Custom Label)
- **Unit Label** (if Custom Label is selected)
- Show in Block
- Show Product Quantities
- Expand
- Tooltip
- Visible In Categories

- Show only when any option of attributes below is selected
- Show only if the following option is selected

**Add From-To Widget** adds a widget to the filter and offers an alternative filtering method in addition to the selected *Display Mode*.

**Minimum Slider Value** and **Maximum Slider Value** narrow the limit of the slider for the convenient filtering.

For instance, there are products in the category within the price range from 20 to 200\$. But there are also several products with the price above 1000\$. Admin can specify the **Maximum Slider Value** to 200\$, and the products with the price above 1000\$ will not be included in a sample. However, if customers leave the slider untouched while filtering, these expensive products will be displayed in the search results.

**Slider Step** allows you to specify the step of the slider. It can be either an integer or a fractional number.

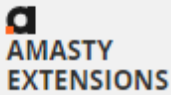

**Measure Units** and **Unit Label** determine the unit of measurement. By default, this is the currency of the current store. It is used on the frontend: in the filter block and in the **Currently Shopping By** section.

---

## 'All-Products' Page Settings

# Configuration

Scope: Default Config 

 ^

- Improved Layered Navigation
- Improved Layered Navigation: All Products**
- Improved Layered Navigation: Brands
- Improved Layered Navigation: Pages
- Improved Layered Navigation: SEO

## General

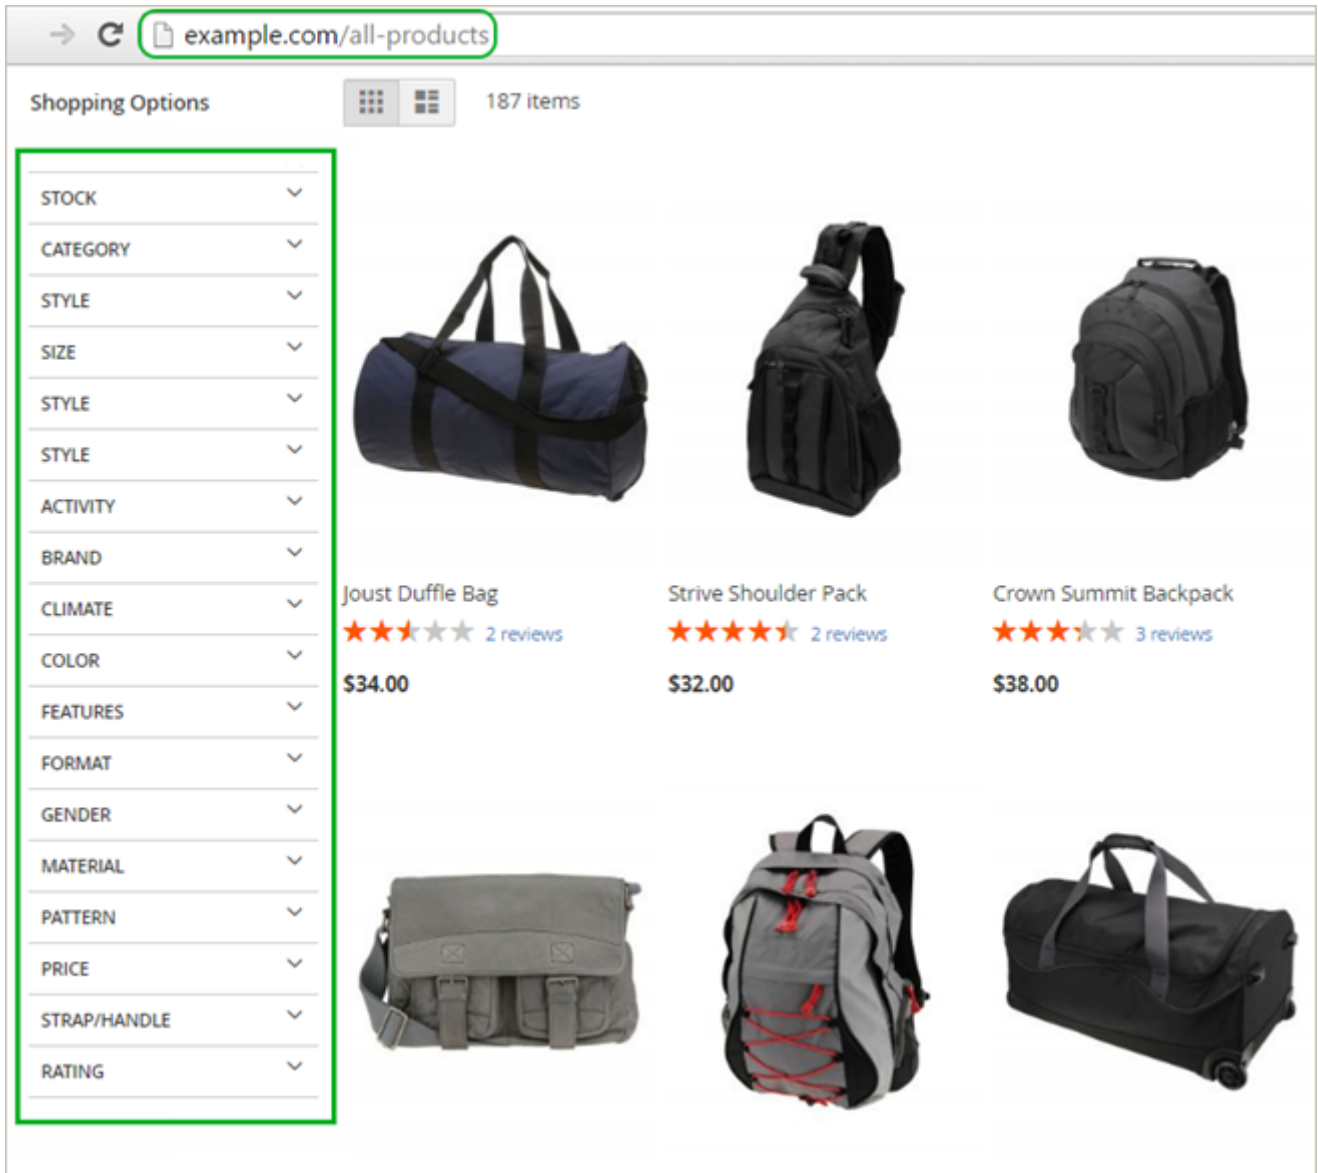

**Enable All Products Page** [store view]

**All Products Page URL** [store view]

**Enable All-Products Page** - Set the option to 'yes' to enable the All Products page, containing all store items and layered navigation filters.

**All Product Page URL** - Specify an appealing URL for the page, e.g. all-products.html.

You can set the name for the default category in **Products** - > **Categories**, e.g. All products

## Brand Settings

### General Settings

To configure general Brands Settings please go to **Stores** → **Configuration** → **Improved Layered Navigation** → **Brands**

## General

<b>Brand Attribute</b> [global]	<input type="text" value="brand"/>	▼
	Creates SEO-friendly brand pages. Every page contains all your products filtered by particular brand and contains unique content that you assigned for the option of brand attribute.	
<b>URL Key</b> [store view]	<input type="text"/>	
	Adds a key before brand name in URL like /[key]/brand-name.html.	
<b>Choose CMS Page</b> [store view]	<input type="text" value="Shop by Brand"/>	▼
	Please make sure the CMS page is enabled (Content -> Elements -> Pages).	
<b>Add Brands Link to Top Menu</b> [store view]	<input type="text" value="Display Last"/>	▼
	Display Link to All Brands Page in Top Menu.	
<b>Show Brands List Popup</b> [store view]	<input type="text" value="Yes"/>	▼
	Enable to display the popup with brands upon hovering over the corresponding top menu link.	

**Brand Attribute** - Here you can set an attribute that will be used as a brand. You can use different attributes as a brand for different store views. It is also possible to setup nice short URLs for pages of a brand attribute (or any other one you prefer), e.g.:

- example.com/canon.html
- example.com/nike.html

To generate such URLs for an attribute, please specify the code of the attribute in the **Brand Attribute** field. This feature works only for one attribute at a time.

**URL Key** - Specify the key that will be added to the URL before the brand name. E.g. your-site/brand/brand-name.html

**Choose CMS page** - select a CMS page where the All Brands List will be shown.

**Add Brands Link to Top Menu** - choose whether to display a Brands link leading to the All Brand Page on the top menu bar. To configure the link position, select one of **two modes**:

- Display First
- Display Last

**Show Brands List Popup** - display brands list and filter them by a character right in the top menu

## Brand Management

To manage brands, please navigate to **Content** → **Amasty Layered Navigation** → **Brand Management**.

In this section, you can conveniently manage all the brands from the grid. For each brand, you can add custom descriptions and logos, adjust position in a slider, insert various CMS blocks and banners, add metadata, and etc. Also, here you can view what attribute is used for brand for a particular store view. You can set different attributes as a brand for different stores in the Brands General Settings Section (**Stores** → **Configuration** → **Improved Layered Navigation: Brands** → **General**).

Open the necessary brand page and scroll to the **Products** tab.

### Products

Sort Order

Visible items: 4  per page   of 1

The screenshot shows a product listing grid with four items. Each item is presented in a card with a blue header. The first three items are labeled 'Pinned' and the fourth is 'Auto'. Each card includes an 'In Stock' badge, a product image, the product name, a SKU, and a price. At the bottom of each card is a pin icon and a 'page 1' navigation control.

Item Name	SKU	Price	Label
Arcadio Gym Short	MSH11	\$0.00	Pinned
Echo Fit Compression Short	WSH07	\$0.00	Pinned
Tiberius Gym Tank	MT10	\$0.00	Pinned
Push It Messenger Bag	24-WB04	\$45.00	Auto

Here you can:

- Reorder items using drag-and-drop
- Place particular products at the top of the listing
- Adjust sorting options
- Move products through the pages
- Pin particular ones

With the add-on, you can manage product sorting for particular store views separately.

First, set the necessary sort order, according to which all products will be displayed.

## Products

---

Sort Order

- None
- Default Sorting**
- Move out of stock to bottom
- Newest products first
- Name: Ascending
- Name: Descending
- Price: Ascending
- Price: Descending

**Sort Order** - select from the dropdown the preferable way of the automatic ordering of the product listing.

**Available options:**

- Move out of stock to the bottom
- Newest products first
- Name: Ascending
- Name: Descending
- Price: Ascending
- Price: Descending

**Search Products** - find products within one current brand product listing by SKU or name.

In the **Visible Items** field the number of all the products that fall under the specified conditions is displayed.

Keep in mind that only **Enabled** products with the **Visible Individually** option can be displayed.

**Drag-and-drop** brand products according to your current marketing needs.

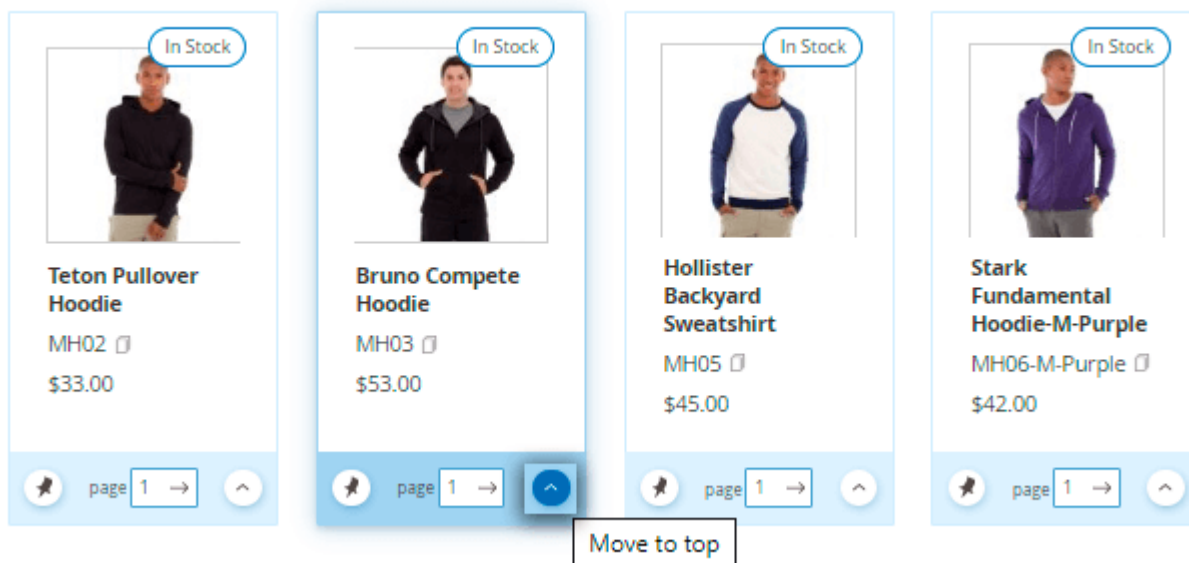

Visible items: 14

9 per page 1 of 2

The image shows a grid of 12 product cards. Each card features a product image, a title, a SKU, a price, and a 'Move to Top' button (a star icon). The items are:

- Sprite Stasis Ball 75 cm**: 24-WG083-pink, \$32.00
- Teton Pullover Hoodie-M-Purple**: MH02-M-Purple, \$70.00
- Affirm Water Bottle**: 24-UG06, \$7.00
- Stark Fundamental Hoodie**: MH06, \$24.00
- Stark Fundamental Hoodie-M-Purple**: MH06-M-Purple, \$42.00
- Savvy Shoulder Tote**: 24-WB05, \$32.00
- Teton Pullover Hoodie**: MH02, \$33.00
- Oslo Trek Hoodie**: MH08, \$33.00

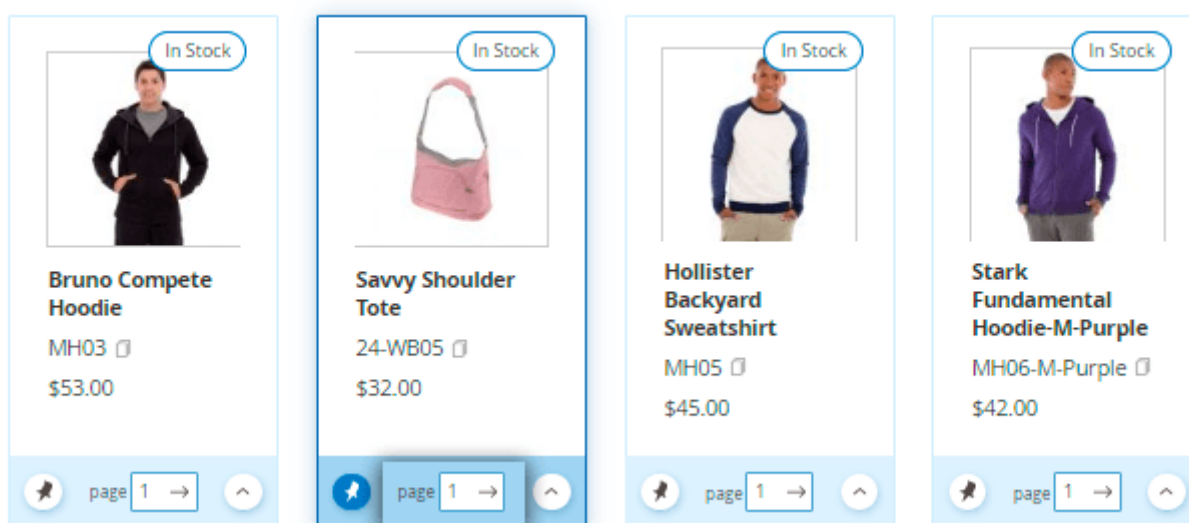

**Move to Top** - hit this button to send a particular item to the first position in the list.

Once you drag a particular product, the **Manual** mode is set automatically and it is “pinned” to a particular location. The feature helps to fixate a product in the same position even after the automatic sorting is activated too.

Moreover, the number of products per page in the admin panel equals the number of products customers see on the frontend. Thus, you will see how the products will be displayed to customers on each page.

With the **move products through the pages** feature it is possible to adjust the of products per each page by moving particular products to another page. As the page number is changed, the product becomes last on this page.

As the result, we set the following products order:

## Products

---

Sort Order

Visible items: 2

Pinned	Auto
<p>In Stock</p>  <p><b>Converse Fulton Lo Trainers</b></p> <p>converse-1 <input type="checkbox"/></p> <p>\$45.00</p> <p><input checked="" type="radio"/> page 1 →</p>	<p>In Stock</p>  <p><b>Converse Four Star T Shirt</b></p> <p>converse-2 <input type="checkbox"/></p> <p>\$12.00</p> <p><input type="radio"/> page 1 → <input type="button" value="↑"/></p>

And on the frontend it will be displayed in the following way:

## Converse - Converse

Converse is an American shoe company with a production output that primarily consists of apparel, skating shoes and lifestyle brand footwear. Converse is known as one of America's most iconic footwear companies.

Converse is an American shoe company with a production output that primarily consists of apparel, skating shoes and lifestyle brand footwear. Converse is known as one of America's most iconic footwear companies.

## SEO Settings

### Migration from Magento 1

If you've been using Improved Layered Navigation extension by Amasty for Magento 1 and now are going to migrate to M2, please pay a careful attention to your **URL settings**.

If you have URLs working based on 'Long with URL key' setting in Magento 1, then, please, configure the following options to migrate to Magento 2 and keep the existing URLs:

**Include Attribute Name** = Yes

**Filter Key** = shopby

See more information on this options below.

## SEO URLs & Robots Tag Control

Check some useful tips and tricks on best SEO practices in our recent article [Magento 2 Layered Navigation: Best Settings For SEO](#)

To manage SEO URLs, go to **Stores → Configuration → Amasty extensions → Improved Layered Navigation:SEO**

### SEO URLs

**Enable** [store view]

URL will look 'category/autumn.html' instead of 'category.html?season=114'.

**SEO-friendly URLs for Attributes (Default Value)** [store view]

**Include Attribute Name** [store view]

Select 'Yes' to add attribute name to the URL scheme, e.g. black -> color\_black

**Filter Key** [store view]

It allows to add filter key to the URL scheme, e.g. black-xl-activity -> shopby/black-xl-activity

**Add Suffix to the Brand Pages and All-products Pages** [store view]

To configure the 'Category URL Suffix' setting please go to Configuration - Catalog - Catalog - Search Engine Optimization - Category URL Suffix. FYI on the category pages the suffix is added regardless of this setting.

**Replace Special Characters With** [store view]

**Separate Attribute Options With** [store view]

For example, if a customer selects 3 options for the attribute 'color', the URL will look like http://example.com/red-green-blue.html.

**Enable** - Set the option to 'yes' to optimize store URLs for search engines. The URLs will become short and clear.

**SEO-friendly URLs for Attributes (Default Value)** - with this setting you can generate SEO-friendly URLs for attributes in bulk. Go to Stores - Attributes - Product - {attribute\_name} - Improved Layered Navigation - SEO - Generate SEO URL setting to apply per-attribute fine-tuning.

**Include Attribute Name** - Select 'Yes' to add the attribute name to the URL scheme, e.g. black → color\_black.

**Filter Key** - The option allows to add a filter key to the URL scheme, e.g. example.com/black-xl-activity → example.com/shopby/black-xl-activity.

**Add Suffix to the Brand Pages and Filtered All-products Pages** - Set to Yes to add a particular SEO suffix to brand pages.

**Replace Special Characters With** - Specify how to replace special characters.

**Separate Attribute Options With** - Select the URL separator for the selected attribute options.

You can use the dash symbol in the **Replace Special Characters With** and **Separate Attribute Options With** fields simultaneously. But this method has a significant drawback. Let's compare the methods of using the same and different separators:

### 1. The same separator.

When building SEO URLs, the system may mistakenly regard one option as another. As a consequence, the results will be irrelevant.

E.g.: 3 different attributes have different options: "red", "cotton" and "new". This is how they will be displayed together in the link: "red-cotton-new" (when you apply a filter containing these 3 options). And there exists the 4-th attribute: its option displays on the frontend as "red+cotton=new". According to the setting, all these symbols will be replaced to the dash separator. As a result: the system may take the filter of three options as a filter of one option (we'll receive 2 identical filters: "red-cotton-new").

### 2. Different separators.

The situation described in the previous paragraph is impossible. When you replace special characters with the "\_" symbol and separate attribute options with the dash symbol, you'll get 2 different filters: "red-cotton-new" and "red\_cotton\_new". In addition, this method provides higher productivity with a large amount of data and filters.

To specify the suffix, go to **Configuration → Catalog → Catalog → Search Engine Optimization → Category URL Suffix**.

## Robots Tag Control

<b>Allow the Module to Modify Robots Meta Tag</b> <small>[store view]</small>	Yes	▼
	Use "No" for compatibility with other SEO extensions.	
<b>Noindex when Multiple Attribute Filters Applied</b> <small>[store view]</small>	No	▼
<b>Automatically Add rel="nofollow" to Filter Links when Required</b> <small>[store view]</small>	Yes	▼
	Please refer per-filter settings to make exclusions.	
<b>Noindex for paginated pages</b> <small>[store view]</small>	No	▼

**Allow the module to modify robots meta tags** - Enable robots tag control to let the module manage indexation according to SEO settings for each attribute. If you disable the option, search engines will index all the store content.

**Noindex when Multiple Attribute Filters Applied** - Enable this option to set the robots to the noindex values for multiple filters.

**Automatically Add rel="nofollow" to Filter Links when Required** - Enable this option to automatically add rel="nofollow" to the filter links.

**Noindex for paginated pages** - Set to **Yes** to set the robots to noindex for paginated pages.

---

## Canonical URL Settings

### Canonical URL

<b>Category Pages</b> <small>[store view]</small>	Brand Filter Only	▼
	Set the structure of canonical urls for category pages. Need help with the setting? Please consult the <a href="#">user guide</a> to configure properly.	
<b>"all-product" Page</b> <small>[store view]</small>	URL Key Only	▼
	To get these settings working properly please make sure you have enabled the Canonical Meta Tag here <a href="#">Stores &gt; Configuration &gt; Catalog &gt; Search Engine Optimizations</a> .	

**You can set structure of canonical URLs for 'key'-related ('Canonical URL' setting) and category ('Category Canonical URL' setting) pages:**

**1.** If you choose a “Keep current URL” option for category page, the canonical URL will have all information and will look like:

```
http://www.your_store.com/category/URL_Key.html?all_get_parameters_displayed_in_state
```

For “all product” page it will look like on the example below:

```
http://www.your_store.com/URL_Key.html?all_get_parameters_displayed_in_state
```

Please keep in mind, that all toolbar parameters (list mode, order, dir, limit), except pagination, won't be added to canonical URL.

You can customize the All Products Page URL in Stores→Configuration→Improved Layered Navigation→All Products.

**2.** If you select the “First attribute value” for category page, the canonical URL will look like this:

```
http://www.your_store.com/category/URL_Key.html?first_attribute_displayed_in_state
```

For “all product” it will be generated like this:

```
http://www.your_store.com/URL_Key.html?first_attribute_displayed_in_state
```

Please, note that attribute's position in URL depends on specified attribute priority.

**3.** With the “Current URL without get parameters” for both “all product” pages and categories, canonical URL will have SEO-friendly attributes and a filter key:

```
http://www.your_store.com/category/URL_Key/seo_friendly_attribute_displayed_in_state.html
```

**4.** If you choose the “Without filters” option for category page, canonical URL will miss all filters and toolbar attributes (except pagination). As an example:

```
http://www.your_store.com/category/URL_Key.html?p=x
```

**5.** With “Brand Filter only” option for category page, the canonical URL will have brand attribute value:

```
http://www.your_store.com/category/URL_Key.html?brand_attribute_displayed_in_state
```

**6.** If you select the URL Key Only For “all product” page, the canonical URL will look like specified in the example below:

[http://www.your\\_store.com/URL\\_Key.html](http://www.your_store.com/URL_Key.html)

## SEO URLs Examples

**Generate SEO URL'** option is enabled. The URL is clear and includes the selected attributes.

The screenshot shows a browser window with the URL `example.com/gear/fitness-equipment/yoga-gym.html` highlighted in the address bar. Below the browser, the storefront navigation includes 'What's New', 'Women', 'Men', 'Gear', 'Training', and 'Sale', with 'Gear' selected. The breadcrumb trail is 'Home > Gear > Fitness Equipment'. The main heading is 'Fitness Equipment'. On the left, there are filters for 'Now Shopping by' (Activity: Yoga, Activity: Gym), 'Shopping Options' (Stock, Category, Size, Activity, Color), and '11 Items'. On the right, there is a 'Sort By' dropdown set to 'Position'. The product grid displays four items: 'Affirm Water Bottle' (\$7.00, 1 review), 'Sprite Yoga Companion Kit' (From \$61.00 To \$77.00), 'Harmony Lumaflex™ Strength Band Kit' (\$19.00, 3 reviews), and 'Sprite Foam Roller' (\$19.00).

**Generate SEO URL'** option is disabled.

## Pagination Settings

To bring your web store SEO to a top tier, you may as well want to check out new **Amasty SEO Toolkit for Magento 2**.

## Pagination Settings

### Use Prev/Next Tags for Improved Navigation Pages

[store view]

Set 'Yes' to use rel="next" and rel="prev" tags and point Google where the next or the previous pages are. Please click [here](#) to learn more details.

### Add Page Number to Meta Title

[store view]

Adds the Page Number at the end of the Meta Title, e.g. 'Apparel | Page 5'

### Add Page Number to Meta Description

[store view]

Adds the Page Number at the end of the Meta Description, e.g. 'Apparel Description | Page 5'

**Use Prev/Next Tags for Improved Navigation Pages** - Enable this option to help Google properly index your paginated content.

**Add Page Number to Meta Title** - Enable the option to add page numbers to meta titles, for example, 'Gear | Page 5'. This will fasten the work of search crawlers and the index building process.

**Add Page Number to Meta Description** - Set the option to **Yes** to add page numbers to meta descriptions. For instance, 'Gear Description | Page 3'.

---

## Custom URL Alias

To customize **URL Alias** for pages with filtered options make sure you set the 'Generate SEO URL' option to 'Yes' (Stores → Attributes → Product → choose necessary attribute and open Improved Navigation tab).

**SEO**

---

**Generate SEO URL** Yes ▼

**Allow Google to INDEX the Category Page with the Filter Applied** Single Selection Only ▼

**Allow Google to FOLLOW Links on the Category Page with the Filter Applied** Single Selection Only ▼

**Add rel="nofollow" to filter links** Auto ▼

Then open the 'Properties' tab, select the necessary filter value, click on the Settings icon and specify a custom URL alias.

**Settings**

**Store View:** All Store Views ▼ ?

## Category Tree

### Tree Settings

To create a category tree please go to **Stores** → **Product** and select the **'Categories'** attribute.

# Product Attributes

Add New Attribute

Search [Reset Filter](#) 67 records found 20 per page 1 of 4

Attribute Code	Default Label	Required	System	Visible	Scope	Searchable	Use in Layered Navigation	Comparable
activity	Activity	No	No	Yes	Global	No	Filterable (with results)	Yes
brand	Brand	No	No	Yes	Store View	No	Filterable (with results)	No
category_gear	Category Gear	No	No	Yes	Global	No	Filterable (with results)	No
category_ids	Categories	No	Yes	No	Global	No	No	No
climate	Climate	No	No	Yes	Global	No	Filterable (with results)	No
collar	Collar	No	No	Yes	Global	No	Filterable (with results)	No
color	Color	No	No	No	Global	No	Filterable (with results)	No
cost	Cost	No	No	No	Web Site	No	No	No

In the Attribute, Information menu open the Improved Layered Navigation tab and adjust the main **Display Properties**: position un the block, product quantities and search box display, number of unfolded options, and etc.

### Display Properties

---

Display Mode	<input type="text" value="Labels"/>	▼
Show in the Block	<input type="text" value="Sidebar"/>	▼
Sort Options By	<input type="text" value="Position"/>	▼
Show Product Quantities	<input type="text" value="Default"/>	▼
Show Search Box	<input type="text" value="No"/>	▼
Number of Unfolded Options	<input type="text" value="5"/> <small>Other options will be shown after a customer clicks the "More" button.</small>	
Expand	<input type="text" value="Expand for desktop anc"/>	▼
	<small>Allows to expand filter automatically right after a page is loaded. Set 'Expand for desktop only' to keep filter minimized on mobile. Keep 'Auto' to work based on the custom theme functionality.</small>	

**IMPORTANT:** To add a particular category to a category tree **make the category Anchor.**

Need help with the settings? Please consult the [user guide](#) to configure the extension properly.

Render All Categories Tree	<input type="text" value="No"/>
	Yes (Render Full Categories Tree) or No (For category filter tree customization)
Category Tree Depth	<input type="text" value="3"/>
	Specify the max level number for category tree. Keep 1 to hide the subcategories
Render Categories Level	<input type="text" value="Current Category Level"/>
	<ul style="list-style-type: none"><li>Root Category</li><li>Current Category Level</li><li>Current Category Children</li></ul>
Subcategories View	<input type="text" value="Folding"/>
	<ul style="list-style-type: none"><li>Folding</li><li>Fly-out</li><li>Fly-out for Desktop Only</li></ul>
Category Tree Display Mode	<input type="text" value="Show Labels And Image"/>
	<ul style="list-style-type: none"><li>Show Labels Only</li><li>Show Images Only</li><li>Show Labels And Images</li></ul>
Expand Subcategories	<input type="text" value="By Click"/>
	<ul style="list-style-type: none"><li>Always</li><li>By Click</li></ul>

**Render All Categories Tree** - Specify to what extend the tree should be expanded.

- Yes (Render Full Categories Tree);
- No (For category filter tree customization);

**Category Tree Depth** - Specify the maximal level number for a category tree.

**Render Categories Level** - Indicate the level from which categories will be shown. There are 3 levels available:

- Root Category
- Current Category Level
- Current Category Children

To get the **Render Categories Level** configuration available, you need to set the **Category Tree**

**Depth** at **2 minimum**, then press Enter button on the keyboard.

**Subcategories View** - For the Labels display type you can specify the subcategories view mode: Folding/Fly-Out.

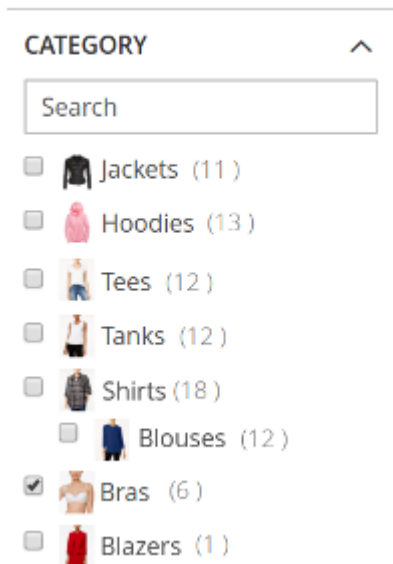

Please, make sure all parent categories have set is\_anchor flag

**Category Tree Display Mode** - Specify the mode for category tree presentation. You can display only text, only images, or both.

- A sample of Show Labels & Images mode

### Shopping Options

See how the **'Render category level'** feature works. The example is created for Women > Tops category.

Render Categories Level	Root Category	Current Category Level	Current Category Children
Render All Categories Tree = Yes	<p>CATEGORY</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Women (75) <ul style="list-style-type: none"> <li><input type="checkbox"/> Tops (50) <ul style="list-style-type: none"> <li><input type="checkbox"/> Jackets (12)</li> <li><input type="checkbox"/> Hoodies &amp; Sweatshirts (12)</li> <li><input type="checkbox"/> Tees (12)</li> <li><input type="checkbox"/> Bras &amp; Tanks (14)</li> </ul> </li> <li><input type="checkbox"/> Bottoms (25) <ul style="list-style-type: none"> <li><input type="checkbox"/> Pants (13)</li> <li><input type="checkbox"/> Shorts (12)</li> </ul> </li> </ul> </li> <li><input type="checkbox"/> Men (72) <ul style="list-style-type: none"> <li><input type="checkbox"/> Tops (48) <ul style="list-style-type: none"> <li><input type="checkbox"/> Jackets (11)</li> <li><input type="checkbox"/> Hoodies &amp; Sweatshirts (13)</li> <li><input type="checkbox"/> Tees (12)</li> <li><input type="checkbox"/> Tanks (12)</li> </ul> </li> <li><input type="checkbox"/> Bottoms (24) <ul style="list-style-type: none"> <li><input type="checkbox"/> Pants (12)</li> <li><input type="checkbox"/> Shorts (12)</li> </ul> </li> </ul> </li> <li><input type="checkbox"/> Gear (34) <ul style="list-style-type: none"> <li><input type="checkbox"/> Bags (14)</li> <li><input type="checkbox"/> Fitness Equipment (11)</li> <li><input type="checkbox"/> Watches (9)</li> </ul> </li> </ul>		
Render All Categories Tree = No = Only For Current Category Path	<p>CATEGORY</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Women (75) <ul style="list-style-type: none"> <li><input type="checkbox"/> Tops (50) <ul style="list-style-type: none"> <li><input type="checkbox"/> Jackets (12)</li> <li><input type="checkbox"/> Hoodies &amp; Sweatshirts (12)</li> <li><input type="checkbox"/> Tees (12)</li> <li><input type="checkbox"/> Bras &amp; Tanks (14)</li> </ul> </li> </ul> </li> </ul>	<p>CATEGORY</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Tops (50) <ul style="list-style-type: none"> <li><input type="checkbox"/> Jackets (12)</li> <li><input type="checkbox"/> Hoodies &amp; Sweatshirts (12)</li> <li><input type="checkbox"/> Tees (12)</li> <li><input type="checkbox"/> Bras &amp; Tanks (14)</li> </ul> </li> </ul>	<p>CATEGORY</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Jackets (12)</li> <li><input type="checkbox"/> Hoodies &amp; Sweatshirts (12)</li> <li><input type="checkbox"/> Tees (12)</li> <li><input type="checkbox"/> Bras &amp; Tanks (14)</li> </ul>

Specify whether to allow or disallow the **Multiselect** option for the category tree.

### Filtering

Allow Multiselect

When multiselect option is disabled it follows the category page (except the filtering from the search page)

Also, you can exclude any category from the filter if it is not required for filtering. To do this, please navigate to **Catalog** → **Categories**, choose the needed category, and expand its **Display Settings**

tab. Then set the **Exclude from Category Filter** toggle to 'Yes'.

The screenshot shows the Magento 2 admin interface for editing a category. On the left is a category tree with 'Men (ID: 11) (982)' selected. The main settings area includes:

- Enable Category** [store view]:  Yes
- Include in Menu** [store view]:  Yes
- Category Name** [store view]:
- Content** section:
- Display Settings**
- Display Mode** [store view]:
- Anchor** [global]:  Yes
- Exclude from Category Filter** [store view]:  Yes (highlighted with a red box)

## Frontend Examples

**BEST GREEN ITEMS FOR SUMMER SEASON**

Powered by TinyMCE

**Image**  No file chosen

**Top CMS Block**

**Bottom CMS Block**

**Add Title & Description** - Choose whether to replace category page metadata with your own info, or show it before/after category data.

**Title** - Specify the custom page title.

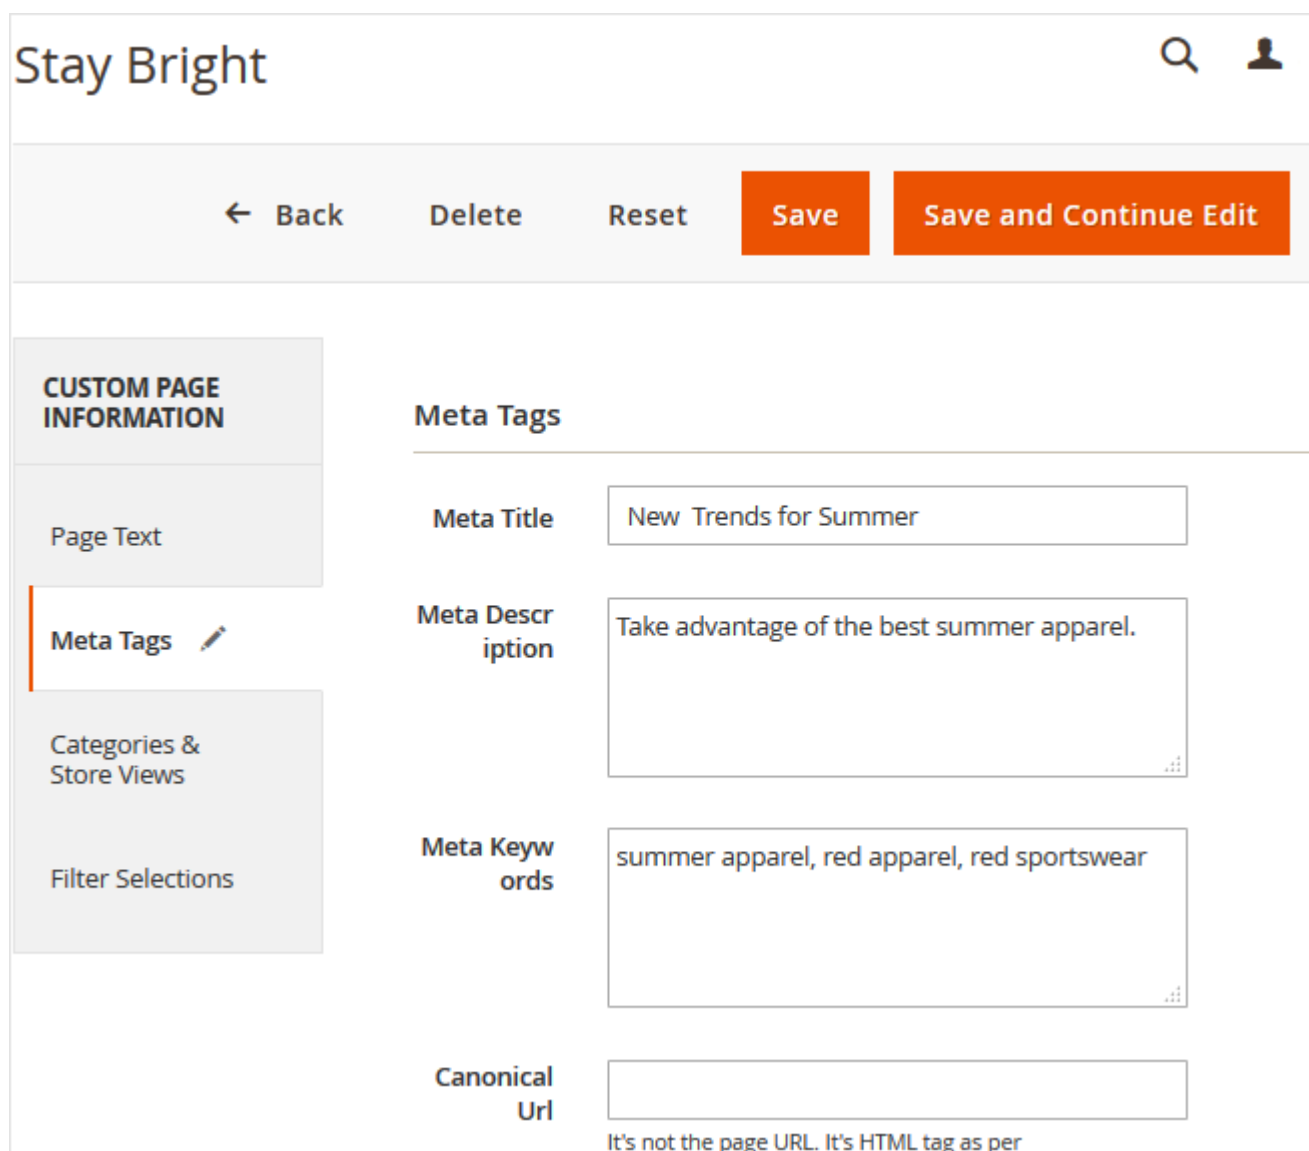

**Description** - Add the page description using the WYSIWYG editor.

**Image** - Choose and upload an image.

Please, keep in mind that for proper functioning image size should be less than the maximum size allowed by a server.

**Top CMS Block** -Select the CMS block on the base of which the page should be created.

**NOTE:** You can either select one of already existing CMS blocks or create a new one. To create a new CMS block please go to **Content** → **Elements** → **Blocks**.

The screenshot shows the 'Stay Bright' CMS page editor. At the top, there is a search icon and a user profile icon. Below the page title, there are navigation buttons: 'Back', 'Delete', 'Reset', 'Save', and 'Save and Continue Edit'. The left sidebar contains a 'CUSTOM PAGE INFORMATION' section with options for 'Page Text', 'Meta Tags' (selected), 'Categories & Store Views', and 'Filter Selections'. The main content area is titled 'Meta Tags' and contains four input fields: 'Meta Title' (New Trends for Summer), 'Meta Description' (Take advantage of the best summer apparel.), 'Meta Keywords' (summer apparel, red apparel, red sportswear), and 'Canonical Url' (empty). A note below the Canonical Url field states: 'It's not the page URL. It's HTML tag as per'.

**Meta Tags Tab** - Specify meta title, description and keywords for each custom page you create.

**IMPORTANT:** Specify the **Canonical Url** when you're adding your custom navigation page to the sitemap with the **XML Google Sitemap** extension.

**Categories & Store Views Tab** - Select store views for which the page will be available. Choose categories products from which will be displayed on a custom page.

The screenshot shows the 'Stay Bright' custom page configuration interface. At the top, there's a search icon and the user 'admin'. Below that is a navigation bar with buttons: 'Back', 'Delete', 'Reset', 'Save', and 'Save and Continue Edit'. The main content area is divided into a sidebar and a main panel. The sidebar, titled 'CUSTOM PAGE INFORMATION', contains sections for 'Page Text', 'Meta Tags', 'Categories & Store Views', and 'Filter Selections'. The main panel, titled 'Selection #1', shows a 'Filter' dropdown set to 'Color' and a 'Value' dropdown set to 'Red'. A list of color options is visible: Black, Blue, Brown (highlighted), Gray, Green, Lavender, Multi, Orange, Purple, Red, White, and Yellow. Below this, an 'Add Selection' section is partially visible with another 'Filter' dropdown.

**Filter & Filter Value** - Select an attribute with its value. You can specify as many combinations (*filter+value*) as you need for a custom page. For instance, specify **selection#1** with *color-red* and **selection#2** with *brand-puma* to display only *red puma* items on a custom page.

See an example of a **custom page with specific filter results**.

## API Methods

You can use Magento web API integrators to communicate with the **Shop By Page** functionality.

The following methods are available:

POST	/V1/amasty_shopbypage/page
GET	/V1/amasty_shopbypage/page
PUT	/V1/amasty_shopbypage/page/{pageId}
DELETE	/V1/amasty_shopbypage/page/{pageId}
GET	/V1/amasty_shopbypage/page/list

**POST** request - to create or update a resource;

**GET** request - to retrieve data from a server;

**PUT** request - to create or update a particular page;

**DELETE** request - to delete a particular page.

## PWA for Improved Layered Navigation (Add-On)

Implement a PWA-ready solution to offer handy navigation on mobiles and tablets. With the Improved Layered Navigation PWA add-on, customers can easily find needed products in the catalog using various filters on any device.

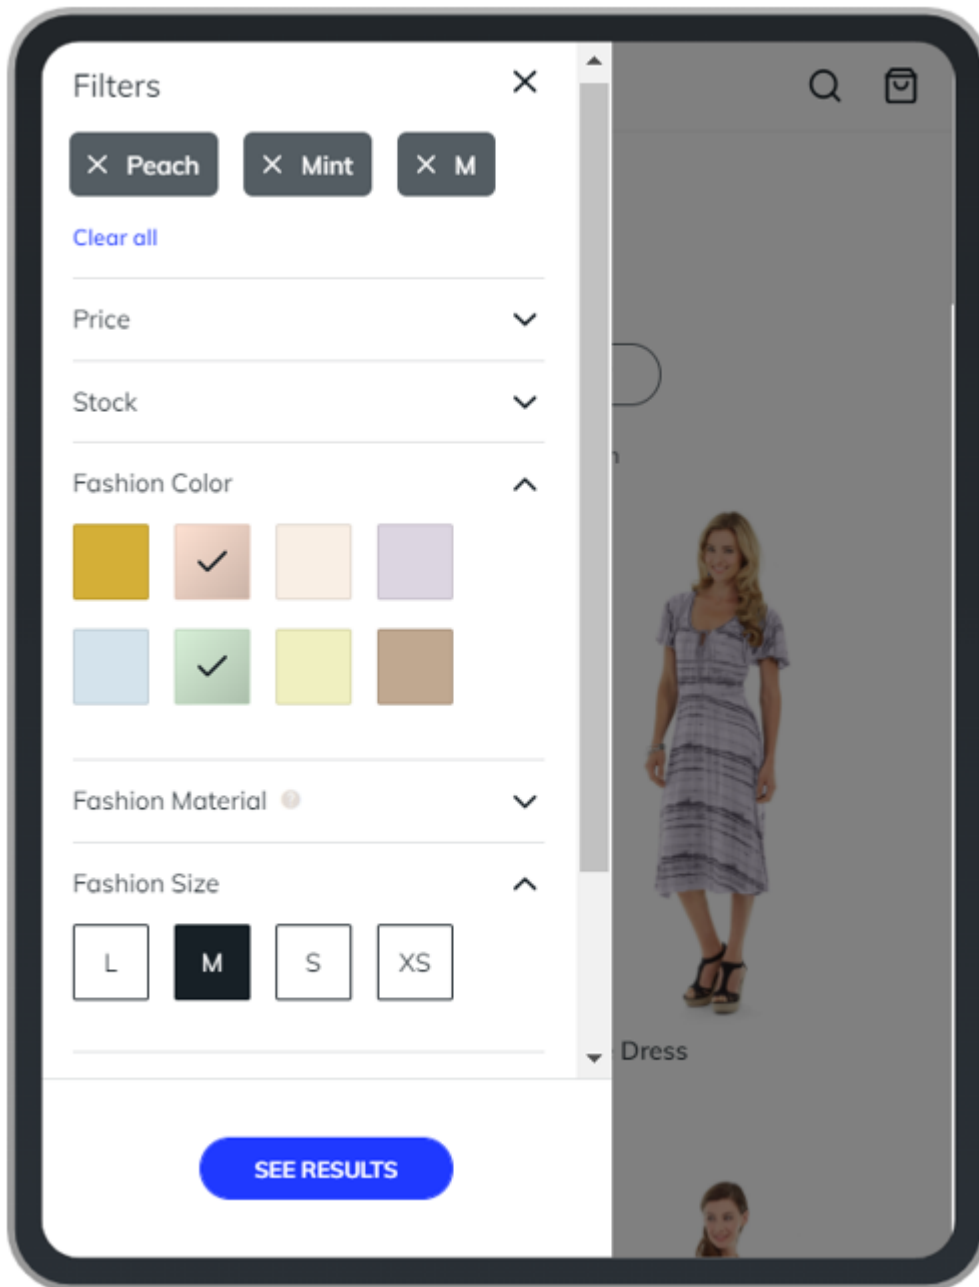

Please keep in mind, the PWA add-on will work properly only if the original **Improved Layered Navigation extension for Magento 2** and a **PWA theme** are installed. Learn more on how to [install PWA Studio here](#).

If the add-on is installed, the Venia theme will display filters on mobile in the following way:

You can additionally implement PWA for [Shop by Brand](#) add-on to use brand management functionality.

How it looks on tablet:

For more information about Magento PWA integration, check out [here](#).

Find out how to install the **Improved Layered Navigation** extension for Magento 2 via [Composer](#).
