

**amasty**

For more details see how the [Jet Theme for Magento 2](#) works.

# Guide for Jet Theme for Magento 2

Trendy, responsive, customizable. The Jet theme brings both stable store performance and stunning visuals to your Magento 2 store.

- Adapt to the latest design trends without spending a fortune on custom development
- Provide customers with a smooth shopping experience on mobile and desktop
- Forget about compatibility problems and poor functionality
- Customize theme design in no time with Style Guide

Jet Theme supports the following Magento editions:

- **Magento Community**
- **Magento Enterprise (Commerce)**
- **Magento B2B**

For the correct work of all the theme features (e.g. floating shopping cart), please make sure that the Jet Theme is applied to the correct store view and consequently reflects on the frontend. Please note that out of the box features of the Jet Theme are not applicable to other themes (e.g. Luma theme).

## Jet Theme Pro edition for Magento 2

As for now, the following 5 extensions below are going with the **Jet Theme Pro edition** out-of-the-box:

- **Lite Mega Menu M2** - [See user guide →](#)
- **Lite Layered Navigation M2** - [See user guide →](#)
- **Product Tabs M2** - [See user guide →](#)
- **Google Invisible reCaptcha M2** - [See user guide →](#)
- **Thank You Page M2** - [See user guide →](#)

The original functionality of these extensions by Amasty is fully available out-of-the-box with the **Jet Theme Pro**. Set up Jet and start using the integrated extensions, no extra costs implied.

[>> See how the extensions work together with Jet on our demo <<](#)

## Jet Theme Premium edition for Magento 2

As for now, the following 8 extensions below are going with the **Jet Theme Premium edition** out-of-the-box:

- **Lite Mega Menu M2** - [See user guide →](#)
- **Lite Layered Navigation M2** - [See user guide →](#)
- **Product Tabs M2** - [See user guide →](#)
- **Google Invisible reCaptcha M2** - [See user guide →](#)
- **Thank You Page M2** - [See user guide →](#)
- **Banner Slider M2** - [See user guide →](#)
- **Shop by Brand M2** - [See user guide →](#)
- **Custom Button M2** - [See user guide →](#)

The original functionality of these extensions by Amasty is fully available out-of-the-box with the **Jet Theme Premium**. Set up Jet and start using the integrated extensions, no extra costs implied.

[>> See how the extensions work together with Jet on our demo <<](#)

## Theme Installation

The Jet theme can be installed both manually or via Composer.

Find out how to install the **Jet Theme** extension for Magento 2 via [Composer](#).

We strongly recommend you to **make a backup of your database** before theme installation. It will keep your files secure, especially if you have lots of customizations applied.

After theme installation, we recommend you to check 5 things to ensure the stability of theme work.

1. Check if the theme is assigned to all necessary websites/store views by going to **Content → Design → Configuration**;
2. Go to the website and/or store view that doesn't have Jet Theme applied to make sure everything is as it should be;
3. Go to the global theme settings and adjust them. Learn how to do this in the [Configurations](#) section of the User Guide;
4. Check newly created CMS pages to ensure that they are correctly assigned to the store view. To do this, go to **Content → Elements → Pages**;
5. It is possible, that several pages duplicates appear. It is expected behavior, as we do not delete existing pages on your instance. EXCEPTION: if you are installing the Jet theme's sample data, products and categories will be deleted and replaced with newly created sample data

## Sample Data

We limited access to the sample data to prevent accidents like deleting all products in the store database. To get access to Jet Theme sample data, please [write us a ticket](#). Alternatively, you can create a ticket in your Customer Account by going to **My Account → Support Tickets**.

The Jet theme goes with sample data, for example, products, images, texts, CMS pages, etc. You can use Jet's sample data to replace the default one by Magento.

The sample data deploy **is not** a necessary step. You can skip it if you want to test the theme with default Luma sample data.

Please note that the sample data deploy deletes all existing products, orders, customers, etc, to replace them with custom data. **If you are installing the sample data over the existing store data, we strongly advise you to make a backup of all data.**

### How to install sample data?

Before installing the specified Jet sample data, please install the Luma sample data first. To do so, please follow the step-by-step instructions below.

#### Luma Sample Data

1. Navigate to the root directory of your Magento 2 store.
2. Run the following CLI command to install Magento 2 sample data:

```
php bin/magento sampledata:deploy
```

3. To authenticate from repo.magento.com, enter your username, and password.
4. After successfully installing Magento 2 sample data, run the following commands one by one.

```
php bin/magento setup:upgrade  
php bin/magento setup:di:compile  
php bin/magento setup:static-content:deploy -f
```

#### Jet Sample Data

To install the Jet theme sample data, the first step is to upload the files of the Jet Sample data and then run the following commands one by one:

```
php bin/magento setup:upgrade  
php bin/magento jettheme:sampledatab:deploy --clean
```

The **php bin/magento jettheme:sampledatab:deploy --clean** command permanently deletes all existing products and categories on this Magento instance and installs the sample data of Jet theme.

This an important step that ensures the sample data is correctly installed, without mixing with previously created items.

After that, run the following strings:

```
php bin/magento indexer:reindex
php bin/magento cache:flush
php bin/magento setup:static-content:deploy -f
```

That's it — the sample data is installed to your Magento instance.

## Jet Theme Configurations

To configure the Jet Theme, please go to the **Stores → Configuration → Jet Theme**.

### Style Switcher

#### Style Switcher

Choose Style [store view]

Food	▼	?
Food		
Sport		

'bin/magento setup:upgrade && bin/magento setup:static-content:deploy' command must be run in the console when the style is selected

Apply

Choose Style - choose one of the styles available in the dropdown and hit the 'Apply' button below to see how the settings below are changed according to the style configurations.

Then click 'Save' and run the following command in the console to apply style to the frontend:

```
'bin/magento setup:upgrade && bin/magento setup:static-content:deploy'
```

Please check [this part](#) of the guide if you want to know how to apply different styles per the different store views.

### General Settings

## General

Allow Access to Style Guide at Frontend  ?  
[global]

**Allow Access to Style Guide at Frontend** - set to Yes to enable access to the Style Guide via frontend link. We advise you to restrict access to Style Guide in the Production environment.

To access the Style Guide, use the following link format:

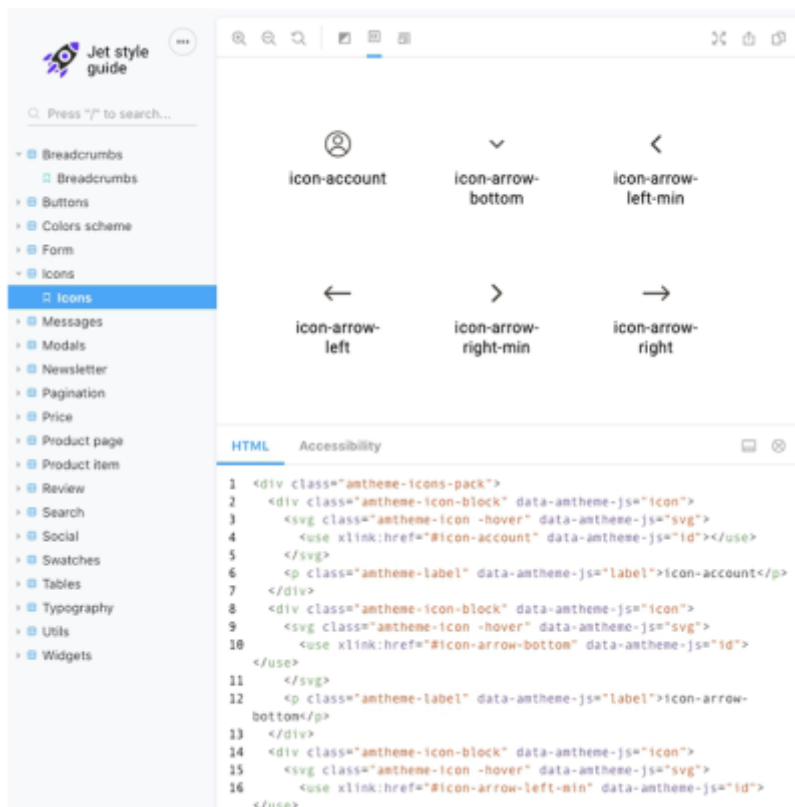

[http://example.com/amasty\\_jettheme/styleguide](http://example.com/amasty_jettheme/styleguide)

For example, on the demo instance, the link looks as follows:

[https://jet-theme-m2.magento-demo.amasty.com/amasty\\_jettheme/styleguide](https://jet-theme-m2.magento-demo.amasty.com/amasty_jettheme/styleguide)

The **Style Guide** is a comprehensive documentation Storybook-based tool that consists of font, layouts, elements settings. They are used to give a standardized look to the stores' frontend.

An example of a style guide page is shown in the screenshot below.

## Additional Elements

### Additional Elements

Sticky Add to Cart Panel at Product Page [store view]

Dropdown menu: Sidebar (selected), Disabled, Sidebar, Horizontal Bar

Swatches Type [store view]

Please note that if the **Sticky Add to Cart (Horizontal Bar)** is also enabled, then only the Sticky Add to Cart (Horizontal Bar) will be displayed and the Sticky header won't be visible.

Please note that the **Sticky Add to Cart (Horizontal Bar)** won't be visible for the out-of-stock products.

### Horizontal Bar

### Sidebar

**About the Barbecued squid salad**

This very dish deserves a little pause before being eaten - just look at the perfection! It's all yours, blazing to make your meal the best time of the day with its taste, its healthiness, and its appearance. Though being nutritional, it remains healthy and perfect to keep you fit. Order it on a special hour and get a discount!

**Ingredients:** fresh squid, lime, olive oil, garlic, red onion, mango, red chili, black beans, avocado, coriander.

**How to cook the Barbecued squid salad at home?**

**Ingredients:**

- For the squid:**
  - 400g fresh prepared squid
  - peel 3 times (reserve the juice for the salad, and wedges, to serve)
  - 2 tbsp extra virgin olive oil
  - 1 garlic clove, smashed flat
  - 1 1/2 tsp mixed peppercorns, crushed
- For the salad:**
  - 1 large red onion, finely sliced
  - 1 large mango, cut into small chunks
  - 1 large red chili, finely shredded (Omit if you don't like it too hot)
  - 400g can black beans, well rinsed then patted dry
  - 3 ripe avocados
  - small pack coriander (leaves only, torn)
  - extra virgin olive oil, for drizzling

**STEP 1**

Heat the barbecue. Meanwhile, marinate the squid for at least 30 mins, or up to 4 hrs. First, slash the squid tubes all over at 5mm-1cm intervals on each side, cutting through most of the flesh but leaving the sides intact. If there are only particularly large tubes, cut them in half width-ways. Put into a non-metallic bowl with the other squid ingredients and leave to marinate.

**Barbecued squid salad**

**Minicart**

## Minicart

**Open Minicart**  
[store view]

Yes

Please note that "Open Minicart" from our theme will be disabled automatically once Amasty Ajax Shopping Cart installed.

**Enable Sticky Minicart**  
[store view]

No

**Open Minicart** - Set 'Yes' to enable 'Open Minicart'.

Please note that "Open Minicart" from our theme will be disabled automatically once Amasty **Ajax Shopping Cart** installed.

**Enable Sticky Minicart** - Set 'Yes' to enable Sticky Minicart.

This is an example of how the Sticky Minicart looks on the frontend:

The screenshot displays a product page for 'Banana & tahini healthy porridge bowl'. The breadcrumb trail is: HOME > WHAT'S ON THE MENU? > MEALTIME > BREAKFAST > BANANA & TAHINI HEALTHY PORRIDGE BOWL. A green notification bar states: 'You added Banana & tahini healthy porridge bowl to your shopping cart.' The product image shows a bowl of porridge topped with strawberries, blueberries, raspberries, and kiwi slices. The product title is 'Banana & tahini healthy porridge bowl'. Below the title, it says 'BE THE FIRST TO REVIEW THIS PRODUCT' and 'IN STOCK | SKU#'. A description follows: 'We know one magical way to start any day of life is with a bowl of porridge (well, there's no sauce, that's only a myth). This healthy porridge bowl for breakfast. Packed with nutritious ingredients, it's designed to fuel your mind and body, making your day challenges the day is preparing for you.' The quantity is set to 1. The price is \$10.89. An orange 'Add to Cart' button is visible. The sticky minicart on the right contains three items: 'Oat & chia healthy porridge bowl' (Qty: 2, Price: \$12.89), 'Banana & tahini healthy porridge bowl' (Qty: 3, Price: \$10.89), and 'A cooking class with chef Julie' (Qty: 1, Price: \$70.00). The cart subtotal is \$102.67. A green 'Checkout' button and a purple 'View and Edit Cart' link are at the bottom of the minicart. At the bottom of the product page, there are tabs for 'Details', 'Reviews', 'FAQ', 'Video', 'Loyalty Program', and 'Image Gallery'. A paragraph of text reads: 'This very dish deserves a little pause before being eaten - just look at this perfection! It's all guns blazing to make your mealtime the best time of the day: with its smell, its taste, its healthiness, and its appearance. Though being nutritional, it remains healthy and perfect to keep you fit. Order it on a special hour and get a discount!' The Amasty logo is at the bottom center.

## Sticky Header

Please note that if the **Sticky Add to Cart (Horizontal Bar)** is also enabled, then only the Sticky Add to Cart (Horizontal Bar) will be displayed and the Sticky header won't be visible.

### ⌵ Sticky Header

<b>Enable Sticky Header</b> <small>[store view]</small>	Yes	▼
Please note that "Enable Sticky Header" from our theme will be disabled automatically once Amasty Mega Menu installed.		
<b>Always Display Sticky Header</b> <small>[store view]</small>	No	▼
<b>Hide on Scroll Down</b> <small>[store view]</small>	50%	
% of the screen height after which sticky header should be hidden		
<b>Display on Scroll Up</b> <small>[store view]</small>	Yes	▼

**Enable Sticky Header** - Set 'Yes' to enable Sticky Header.

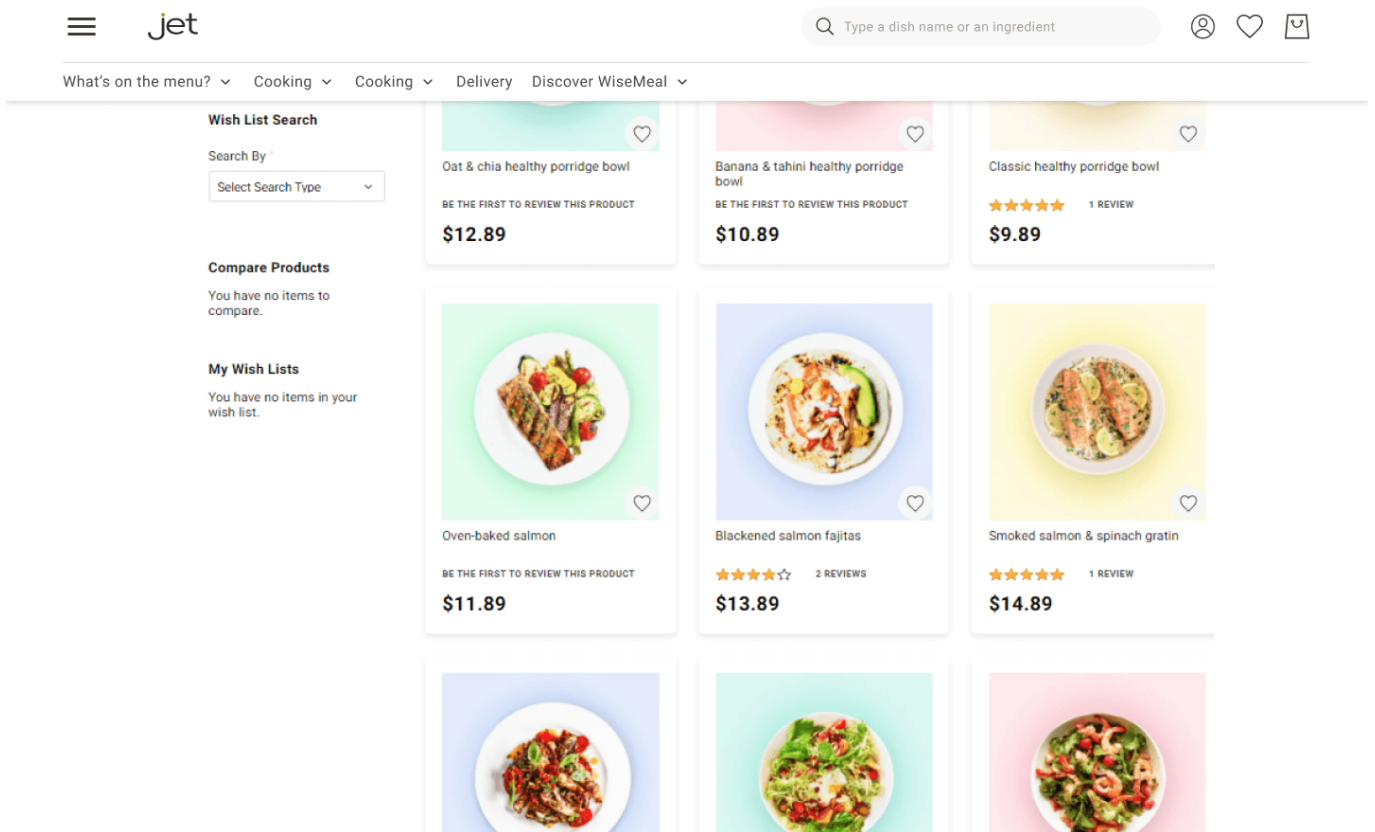

Please note that "Enable Sticky Header" from our theme will be disabled automatically once Amasty **Mega Menu** installed.

**Always Display Sticky Header** - Choose whether to always display Sticky Header or only if a certain condition is met. Choose 'No' to see extra configuration options.

**Hide on Scroll Down** - This option becomes visible only if you've chosen 'No' in the option 'Always Display Sticky Header'. Specify here % of the screen height after which sticky header should be hidden, e.g. 50%.

**Display on Scroll Up** - his option becomes visible only if you've chosen 'No' in the option 'Always Display Sticky Header'. Set 'Yes' to display Sticky Header on a scroll up.

This is an example of how the Sticky Header looks on the frontend:

## Newsletter Subscription

### Newsletter Subscription

Show Newsletter Subscription Form [store view]

## Color Scheme

The Jet theme allows you to quickly customize the colors of your store. To do that, simply choose the

colors you'd like to see for a variety of elements.

Please note that the command below must be run in the console when any of the settings in the fields of the 'Color Scheme' section have been changed.

```
'bin/magento setup:upgrade && bin/magento setup:static-content:deploy'
```

### Color Scheme

Enable Custom Colors [store view] Yes ?

'bin/magento setup:upgrade && bin/magento setup:static-content:deploy' command must be run in the console when any of the settings in the fields below have been changed.

Color Scheme Presets [store view] Default ?

- Default
- Bright
- Dark
- Light
- Pastel

Apply

**Color Scheme Presets** - In order to apply a color scheme preset on a storefront, please follow the steps below:

- 1. Make sure the value of the setting '**Enable Custom Colors**' from the section '**Color Scheme**' is 'Yes';
- 2. Make sure this is the store view you need for changing the color scheme. If it's not, then change to the store view you need and empty all checkboxes '*Use Default*' for the section '**Color Scheme**';

If you haven't prepared any child themes on a backend yet, please consult [this part](#) of the user guide first in order to apply color scheme presets to the store views correctly.

- 3. Choose the preset you want from the '**Color Scheme Presets**' dropdown (e.g. '*Bright*');
- 4. Click on the '**Apply**' button below the dropdown. Now you can see the available color options included into the preset;
- 5. Click on the '**Save**' button to apply a preset to the store view you've selected;
- 6. Run the

```
'bin/magento setup:upgrade && bin/magento setup:static-content:deploy'
```

command.

Feel free to customize colors within the ready-made presets, but make sure not to reapply the same

preset again over the color scheme customizations unless you want to reset these customizations.

## How to apply Color Schemes, Google Fonts and Styles from the Style Switcher to different Store Views?

With Jet Theme, you can apply different Color Schemes and Google Fonts for different Store Views. It allows for more customization options so that your storefront will get a unique design.

To do that, you need to create a child theme. It can be done in two ways.

### If the Jet Theme is installed in the /vendor/amasty/

1. Create the /Amasty/ folder in the /app/design/frontend/
2. In the /Amasty/ folder create a new folder with <your\_theme\_name>. For example, a folder can be named something like /JetTheme\_GermanStore2/
3. Copy the following files from the /vendor/amasty/theme-frontend-jet-theme/ of your Magento 2: **registration.php**; **theme.xml** and **media/preview.jpg** (here it's a required file). These files should be copied to the /app/design/frontend/Amasty/<your\_theme\_name> . In our example above, the full path will be like /app/design/frontend/Amasty/JetTheme\_GermanStore2
4. Modify the copied *registration.php* file. You need to adjust text by switching the "JetTheme" in the 'frontend/Amasty/JetTheme' to the '<your\_theme\_name>', and save the file. For instance, in the example case, it should be the 'frontend/Amasty/JetTheme\_GermanStore2'.
5. Modify the *theme.xml* file. In the </title> set the name of the theme, that will be used in the Admin panel. For example, 'Jet Theme by Amasty 2' or 'Jet Theme in Dark Colors' etc. See the way it looks on the screenshot below.

The screenshot shows the Magento 2 Admin Panel interface. On the left is a vertical sidebar with navigation icons for Dashboard, Sales, Catalog, Customers, Marketing, Content, Reports, Amasty, Stores, System, and Find Partners & Extensions. The main content area is titled 'MyStore' and includes a search bar, a notification bell with a '7' badge, and a user profile 'admin'. Below this is a configuration bar with 'Scope: Store View', 'Back' and 'Save and Continue' buttons, and a prominent red 'Save Configuration' button. The 'Default Theme' section features a dropdown menu for 'Applied Theme' with a 'Use Default Value' button. The dropdown menu is open, listing several theme options, with 'Jet Theme by Amasty' selected and highlighted in red. Below the theme selection is a 'Design Rule' section and a 'User Agent Rules' section with an 'Add New User Agent Rule' button. At the bottom, there is a table with columns for 'Search String', 'Theme Name', and 'Actions', and a light green informational box stating: 'Search strings are either normal strings or regular expressions (PCRE). They are matched in the same order as entered. Examples: Firefox: /^mozilla/i'.

6. Also, in the `<parent>` tag set 'Amasty/JetTheme' instead of the 'Magento/blank' and save the file.
7. If you are working in the Developer Mode, you need to run the 'bin/magento setup:upgrade' command from your Magento 2 root.
8. In case you are working in Production Mode, you need to run the 'bin/magento setup:upgrade && bin/magento setup:di:compile && bin/magento setup:static-content:deploy' command from the Magento 2 root folder.

### If the Jet Theme is installed in the /app/design/frontend/Amasty/

1. In the /app/design/frontend/Amasty/ folder create a new folder with `<your_theme_name>`. For example, a folder can be named something like /JetTheme\_GermanStore2/
2. Copy the `registration.php`, `theme.xml` files and `/media/` folder from the /app/design/frontend/Amasty/JetTheme of your Magento 2 to the /app/design/frontend/Amasty/`<your_theme_name>`. For example, the destination folder can be something like /app/design/frontend/Amasty/JetTheme\_GermanStore2/
3. Modify the copied `registration.php` file. You need to adjust text by switching the "**JetTheme**" in the 'frontend/Amasty/**JetTheme**' to the '`<your_theme_name>`', and save the file. For instance, in the example case above it should be the 'frontend/Amasty/**JetTheme\_GermanStore2**'.
4. Modify the `theme.xml` file. In the `</title>` set the name of the theme, that will be used in the Admin panel. For example, 'Jet Theme by Amasty 2' or 'Jet Theme in Dark Colors' etc. Then, in the `<parent>` tag set 'Amasty/JetTheme' instead of the 'Magento/blank' and hit the Save button.

5. If you are working in the Developer Mode, you need to run the 'bin/magento setup:upgrade' command from your Magento 2 root.
6. In case you are working in Production Mode, you need to run the 'bin/magento setup:upgrade && bin/magento setup:di:compile && bin/magento setup:static-content:deploy' command from the Magento 2 root folder.

### After creation of a Child Theme

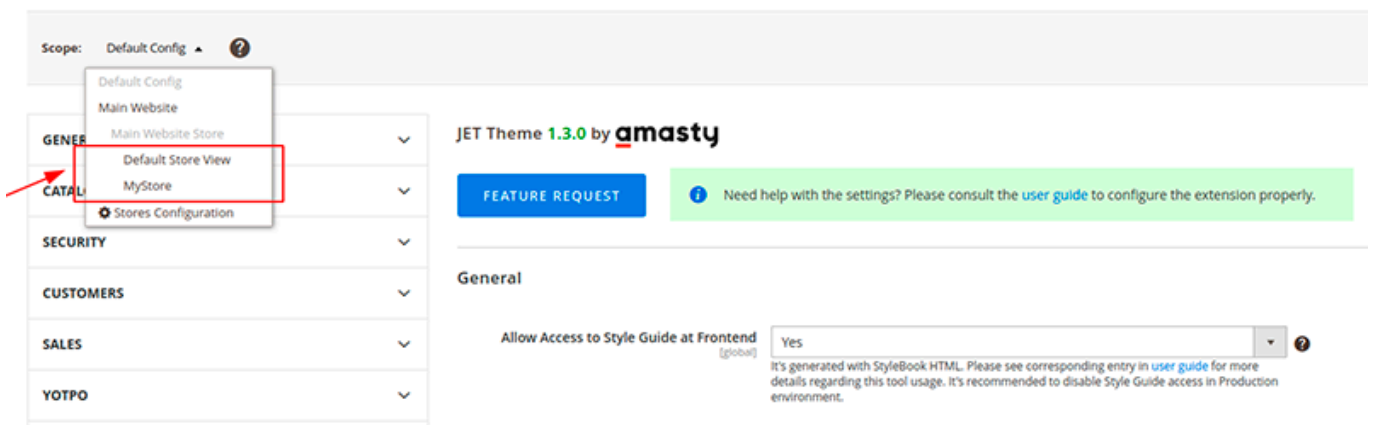

After you created a child theme, you need to apply it to the required Store View. To do that, please do the following steps:

1. In the Admin panel, go to **Content → Design → Configuration**
2. Press the **Edit** button near the required Store View
3. In the **Applied Theme** select the newly created theme name (in the creation process examples above, it was 'Jet Theme by Amasty 2' and 'Jet Theme in Dark Colors')
4. Hit the **Save** button

To apply various Color Schemes and Google fonts for various Store Views, you need to do the following steps.

1. First, please proceed to the Admin panel and go to **Amasty → JET Theme → Configuration**
2. In the **Scope**, select the required Store View and install all necessary Color Scheme and Google Fonts

### Configuration

### Color Scheme

**Enable Custom Colors** [store view]  ?  
'bin/magento setup:upgrade && bin/magento setup:static-content:deploy' command must be run in the console when any of the settings in the fields below have been changed.

**Color Scheme Presets** [store view]  ?

- Primary Color** [store view]   Use Default
- Secondary Color** [store view]   Use Default
- Outline Color** [store view]   Use Default
- Primary Font Color** [store view]  ?  Use Default
- Secondary Text Color** [store view]   Use Default
- Default Background Color** [store view]   Use Default
- Alternative Background Color** [store view]   Use Default
- URL color** [store view]   Use Default
- Placeholder Text Color** [store view]   Use Default
- Special Price Color** [store view]   Use Default
- Small Buttons Color** [store view]   Use Default
- Small Buttons Highlight Color** [store view]   Use Default
- Border Color** [store view]   Use Default
- Border Color - Hover** [store view]   Use Default
- Border Color - Active** [store view]   Use Default
- Error Notification Color** [store view]   Use Default
- Error Notification Text Color** [store view]  ?  Use Default
- Generic Notification Color** [store view]   Use Default
- Generic Notification Text Color** [store view]  ?  Use Default
- Success Notification Color** [store view]  ?  Use Default
- Success Notification Text Color** [store view]  ?  Use Default

### Google Fonts

**Enable Google Fonts** [store view]  ?  Use Default  
'bin/magento setup:upgrade && bin/magento setup:stamand must be run in the console after setting certain valid value in below

**Google Font** [store view]   Use Default  
Specify the Google font name. For example **Roboto**, **Open**  
 Some fonts use extra parameters e.g. **Molle:400i** where (100 = thin, 700 = bold)

1. Press the Save button.

Run the 'bin/magento setup:upgrade' command for Developer Mode. If you are working in Production Mode, please run the 'bin/magento setup:upgrade && bin/magento setup:di:compile && bin/magento setup:static-content:deploy' command.

You can download the [archive with sample files](#) to reproduce steps that are described earlier in the guide.

## AJAX Usage Configuration

### AJAX Usage Configuration

Enable AJAX Add to Compare  
[store view]

Please [apply JET Theme](#) to needed website/storeview to make this option work.

Enable AJAX Add to Wishlist  
[store view]

Please [apply JET Theme](#) to needed website/storeview to make this option work.

Enable AJAX Add to Cart  
[store view]

Please note that "Ajax Add To Cart" from our theme will be disabled automatically once Amasty Ajax Shopping Cart installed. Please [apply JET Theme](#) to needed website/storeview to make this option work.

Please apply the JET Theme to the needed website or store view to make these options work.

**Enable AJAX Add to Compare** - Set 'Yes' if you want the AJAX to work for the '*Compare products*' feature.

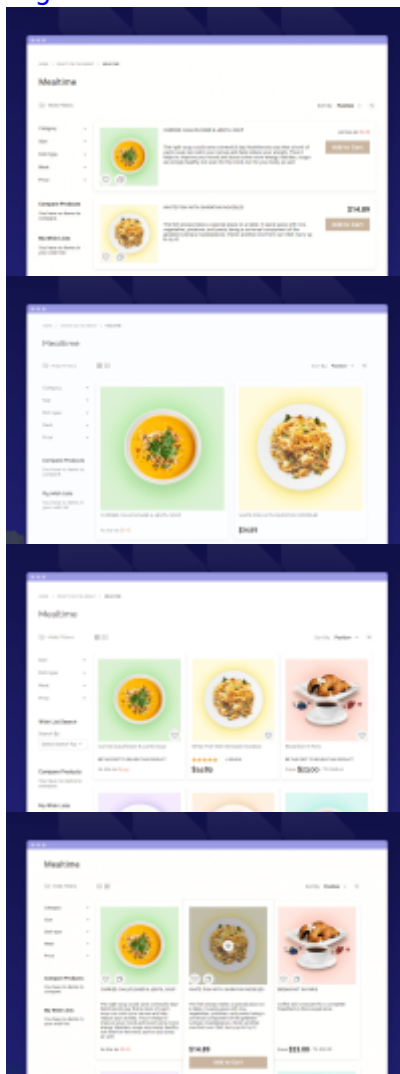

**Enable AJAX Add to Wishlist** - Set 'Yes' if you want the AJAX to work for the '*Wishlist*' functionality of the theme.

**Enable AJAX Add to Cart** - Set 'Yes' if you want the AJAX to work for the '*Add to Cart*' functionality.

Please note that '*Ajax Add To Cart*' from our theme will be disabled automatically once **Amasty Ajax Shopping Cart** installed.

## Category Page

See 4 basic examples of how the configurations described below can be applied:

## Category Page

List Mode  
[store view]

Grid (default) / List	▼
Grid Only	
List Only	
Grid (default) / List	
List (default) / Grid	

**List Mode** - please choose one list mode from the dropdown to configure the way you want products to be displayed on category pages.

As for now, four list modes are available:

- Grid only
- List only
- Grid (default)/List
- List (default)/Grid

**Products per Page on Grid Allowed Values**

[store view]

12,24,36

Comma-separated.

**Products per Page on Grid Default Value**

[store view]

12

Must be in the allowed values list.

**Products per Page on List Allowed Values**

[store view]

5,10,15,20,25

Comma-separated.

**Products per Page on List Default Value**

[store view]

10

Must be in the allowed values list.

**Products per Page on Grid Allowed Values** - Here you can specify one or several values of products to be displayed per page on the category page. Please separate several values by commas for the correct work of this feature.

**Products per Page on Grid Default Value** - Here you can specify the number of products to be displayed per one page on a category if the Grid mode is selected as default.

**Products per Page on List Allowed Values** - Here you can specify one or several values of products to be displayed per page on the category page. Please separate several values by commas for the correct work of this feature.

**Products per Page on List Default Value** - Here you can specify the number of products to be displayed per one page on a category if the List mode is selected as default.

Please note that the number you specify in this field must be in the list of allowed values.

**Allow All Products per Page**  
[store view]

No

Whether to show "All" option in the "Show X Per Page" dropdown.

**Products per Line for Desktop View**  
[store view]

3

2

3

**Products per Line for Mobile View**  
[store view]

1

1

2

To display 2 products per line, please make sure that screen resolution is up to 480 px.

**Allow All Products per Page** - Allow showing all the relevant products per one page without any limitations.

Whether to show "All" option in the "Show X Per Page" dropdown.

**Products per Line for Desktop View** - Choose how many products to display per line on the category pages.

**Products per Line for Mobile View** - Choose how many products to display per line on the category pages on mobile. To display 2 products per line, please make sure that screen resolution is up to 480 px.

**Enable Quick View**  
[store view]

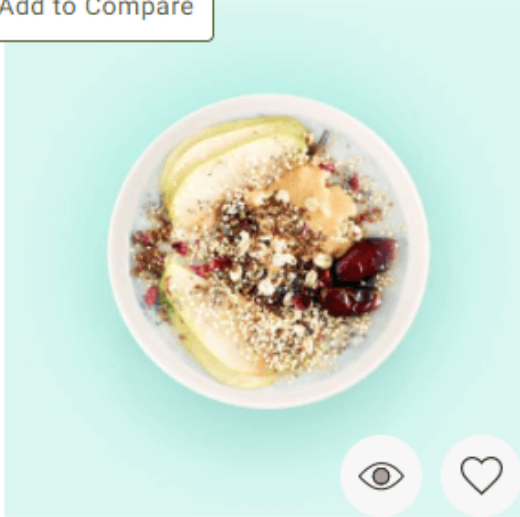

Yes

Please [apply JET Theme](#) to needed website/storeview to make this option work.

**Enable Quick View** - Use this setting to switch on/off the Quick View feature for the product cards on the frontend.

Please apply [JET Theme](#) to needed website/storeview to make this option work.  
[See how the Quick View feature looks on the frontend:](#)

Add to Compare

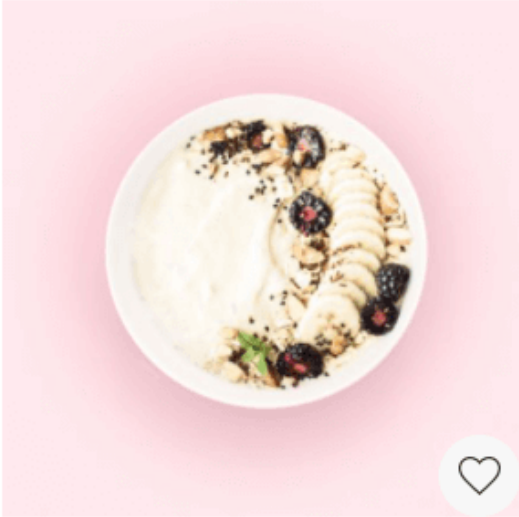

Oat & chia healthy porridge bowl [Quick View](#)

BE THE FIRST TO REVIEW THIS PRODUCT

**\$12.89**

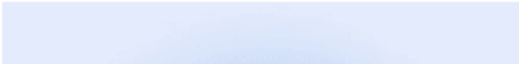

**Add to Cart**

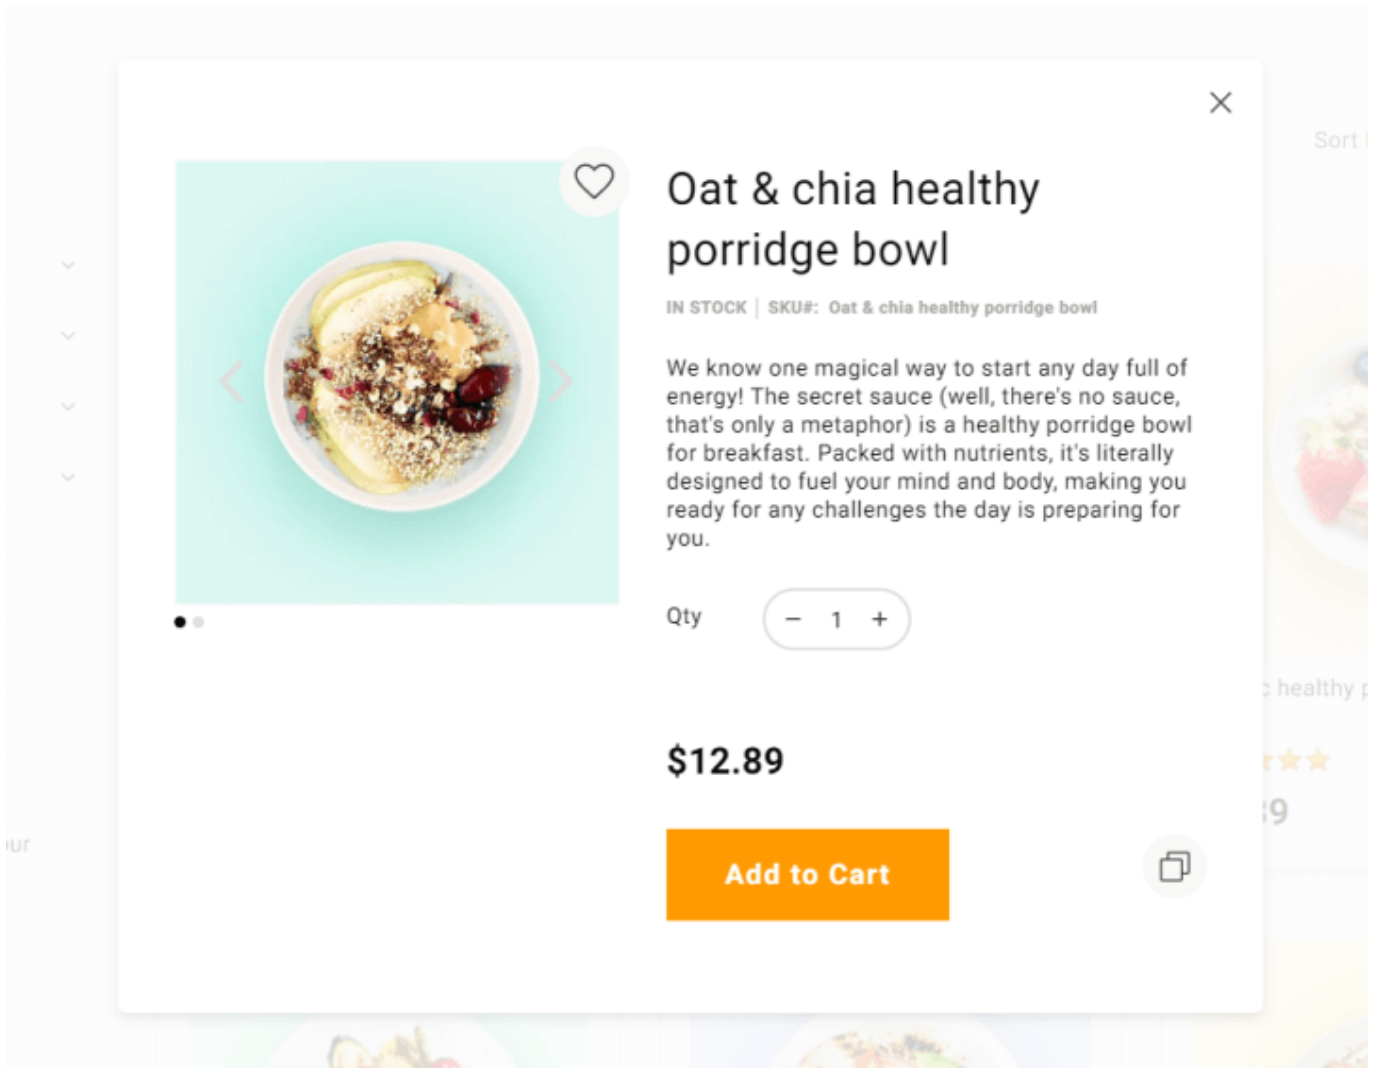

Banana & tahini healthy porridge bowl

BE THE FIRST TO REVIEW THIS PRODUCT

**\$10.89**

<b>Display Product Name</b> <small>[store view]</small>	<input type="text" value="Default"/> ▼ Default All Caps All Lower Case Each Word with the Capital Letter
<b>Show Product Reviews</b> <small>[store view]</small>	<input type="text" value="Yes"/> ▼

**Display Product Name** - Choose how do you want to display product names on the frontend:

- 'Default' - the standard Magento product names display;
- 'All Caps' - with all letters capitalized;
- 'All Lower case' - with no capital letters at all;
- 'Each Word with the Capital Letter' - each word will start with the capital letter.

**Show Product Reviews** - Enable/disable the display of the product reviews.

Swatch Display Type <small>[store view]</small>	<input type="text" value="Hover"/> <input checked="" type="text" value="Hover"/> <input type="text" value="Always"/>
Show Swatch Tooltip <small>[store view]</small>	<input type="text" value="Yes"/>
Show Swatches in Product List <small>[store view]</small>	<input type="text" value="Yes"/>

**Swatch Display Type** - Choose whether to show the swatches all the time or just on hover.

**Show Swatch Tooltip** - Use this setting to enable the display of tooltips for the swatches configured.

**Show Swatches in Product List** - Enable/disable showing swatches in the product list.

Display Product Count <small>[store view]</small>	<input type="text" value="Yes"/>
Display Category Filter <small>[store view]</small>	<input type="text" value="No"/> ?
Show Short Description <small>[store view]</small>	<input type="text" value="No"/>

**Display Product Count** - Enable/disable the display of the product count on the frontend.

**Display Category Filter** - Enable/disable the display of the category filter on the frontend.

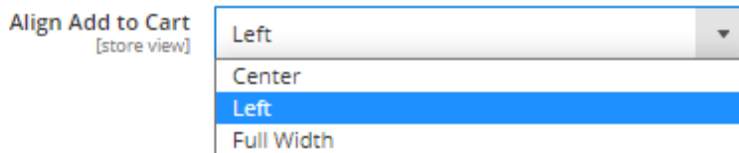

Please kindly note that this feature was introduced in Magento 2.4.0 and may not be available in older versions.

**Show Short Description** - Enable/disable display of the short description.

Display Add to Cart Button <small>[store view]</small>	<input type="text" value="On Hover"/> <input type="text" value="No"/> <input type="text" value="Always"/> <input checked="" type="text" value="On Hover"/>
---	---

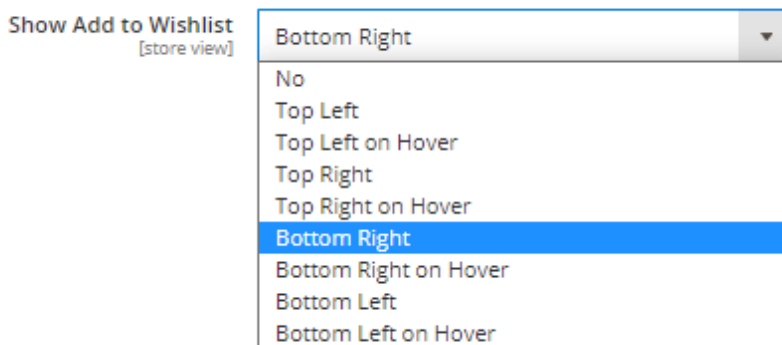

**Display Add to Cart Button** - Choose when to display your 'Add to Cart' buttons:

- 'No' - do not display the 'Add to Cart' buttons on category pages at all;
- 'Always' - always show the 'Add to Cart' buttons on category pages;
- 'On hover' - show the 'Add to Cart' buttons on category pages on hover only.

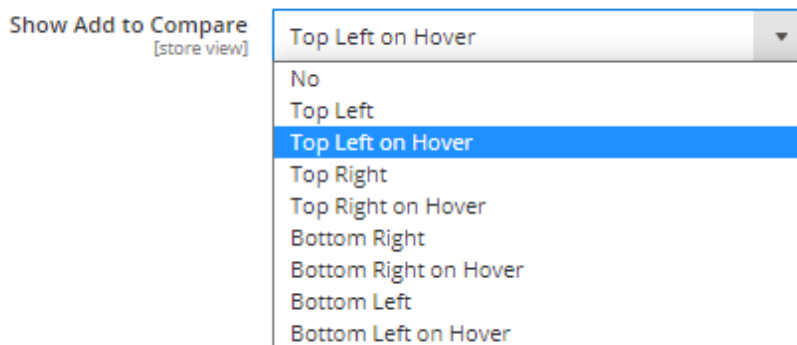

**Align Add to Cart** - Choose the style for your 'Add to Cart' buttons display:

- Center;
- Left;
- Full Width.

**Show Add to Wishlist** - Choose where and how to display the 'Add to Wishlist' buttons.

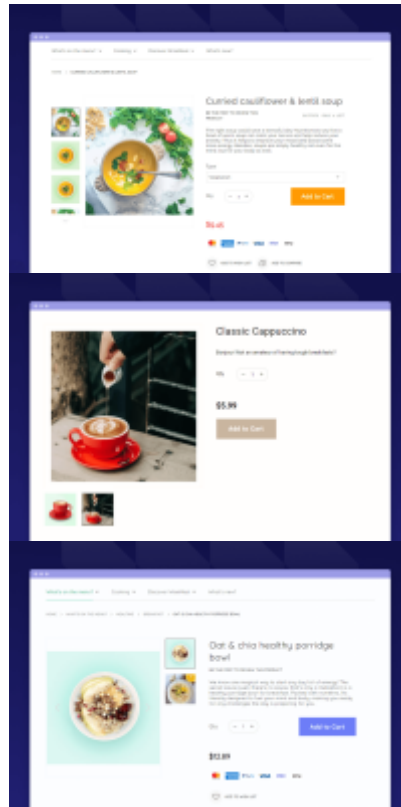

**Show Add to Compare** - Choose where and how to display the 'Add to Compare' buttons.

See the frontend examples [here](#) or check our [demo](#) per store views.

## Product Page

See 3 basic examples of how the configurations described below can be applied:

### Product Page

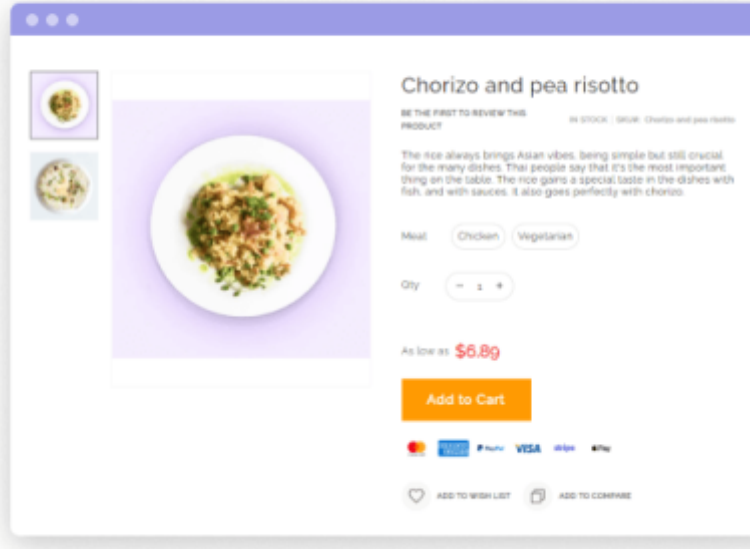

- Show Image Gallery Thumbnails** [store view] Left
- Show Product Review** [store view] Yes

<b>Enable Custom Mini Footer</b> <small>[store view]</small>	Yes
<b>Mini Footer CMS Block</b> <small>[store view]</small>	Contact Us
	<div style="border: 1px solid #ccc; padding: 5px;"><p>Please select a static block.</p><p>Amasty JetTheme Homepage categories Block</p><p>Amasty JetTheme Homepage main banner Block</p><p>Amasty JetTheme Secondary Banner - Static</p><p>Amasty JetTheme Secondary Banner with Slider</p><p>Amasty JetTheme Products from Category</p><p>Amasty JetTheme Homepage block</p><p><b>Contact Us</b></p><p>Amasty JetTheme Explore More</p><p>Amasty JetTheme Left Menu</p><p>Amasty JetTheme Products Preview</p><p>Amasty JetTheme About Us</p><p>Amasty JetTheme Whats new</p><p>Amasty JetTjeme Test Login (credentials)</p><p>AmastyJet Thank You Page Title</p><p>AmastyJet Image Gallery</p><p>Catalog Events Lister</p><p>AmastyJet Thank You Page Title For Dark</p><p>Amasty JetTheme Whats new Dark</p></div>

**Enable Custom Mini Footer** - set 'Yes' to enable custom mini footer. For the correct work of this option please create the relevant CMS block first.

**Mini Footer CMS Block** - Choose the relevant CMS block from the dropdown.

- Please note that this option can be visible only if you've set 'Yes' for the option '*Enable Custom Mini Footer*'.
- Please make sure that CMS Block is enabled.

<b>Enable Custom Mini Footer</b> <small>[store view]</small>	No
<b>Copyright Text</b> <small>[store view]</small>	Copyright © 2013-present Magento, Inc. All rights reserved 

**Copyright Text** - Please note that this option won't be visible if you've selected 'Yes' for the option '*Enable Custom Mini Footer*'. Specify the copyright text to be displayed on your footer.

**Enable Custom Layout** [store view]

**Layout**  
[store view]

The image displays a grid of footer layout options. On the left, under the 'Two Columns' tab, there are four vertical blocks: 'Footer Logo' (with a rocket icon), 'Social' (with four dots), 'Payment Methods' (with four horizontal bars), and 'CMS Block' (with a grid of six squares and text). On the right, under the 'Three Columns' tab, there are two vertical blocks: 'Footer Links' (with two columns of horizontal bars) and 'Subscription Block' (with a form field and a button).

**Enable Custom Layout** - set 'Yes' to choose from the 2- or 3-columns footer layout and customize its content. Just drag-n-drop cards to configure it.

### Social Links in Footer

This is an example of how the Social Network Links block looks on the frontend:

**Is Enabled** - Enable and disable the icon.

**Store View** - Choose the store views where the icon will be displayed.

**Sort order** - specify a sort order for the icon.

See these settings [on our demo](#).

## Image Optimization

To start using the Image Optimization and Lazy Load functionality of Jet please make sure that you have installed the 'JetOptimizer' module. Installation of this module is required if you have 1.12.0 version of the Jet Theme and higher.

The correct functioning of the theme requires some special software to be installed: [JPEG optimization tool](#) / [PNG optimization tool](#) / [GIF optimization tool](#) / [WEBp tool](#).

You can install the **Webp tool package** to your server using the command

```
sudo apt-get install webp
```

. For a specific setup with versioning, use [this guide](#).

If you are not sure how to install the necessary software on the server correctly, please contact your administrator or Amasty support team.

Please note, that if you have already installed or just going to install our [Magento 2 Google Page Speed Optimizer](#) extension, then the functionality of this extension will prevail under the Image Optimization and Lazy Load functionality pre-integrated into the theme.

## General Settings

# Image Optimization

## ⌂ General Settings

**Optimize Images** [store view] Yes (Recommended) ▼

**Optimization Console Command** [global] `php bin/magento amastyjet:image:optimize`

**Run Optimization** [global] **Run Optimization**

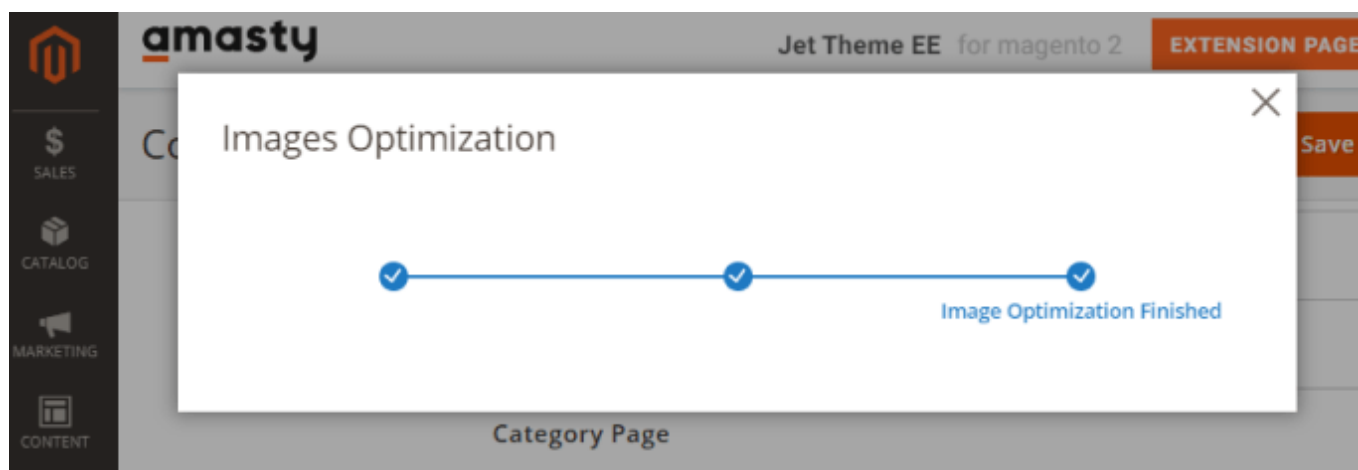

Before run optimization all settings below this button should be saved. And Cache should be cleared.

**Optimize Images** - Set 'Yes (Recommended)' to enable advanced image optimization settings for your store.

**Optimization Console Command** - to run optimization manually, execute the following command:

```
php bin/magento amastyjet:image:optimize
```

**Run Optimization** - press the 'Run Optimization' button after all the optimization settings below are properly configured.

Before you press the 'Run optimization' button all settings below this button should be properly configured, saved and the Cache is cleared.

<b>Enable Multi-Process Generation</b> <small>[global]</small>	<input type="text" value="Yes"/>	
<b>Number of Parallels Processes</b> <small>[global]</small>	<input type="text" value="2"/>	
<b>Process Images per Request</b> <small>[global]</small>	<input type="text" value="3"/>	

**Enable Multi-Process Generation** - select 'Yes' to speed up image optimization.

'Multi-Process Optimization' significantly boosts the image optimization speed. But it generates extra load to the server as well. We recommend first to run the test image optimization process with the 'multi-process' *ON* and monitor your server performance.

The '*Multi-Process Generation*' feature needs the php extension '**pcntl**' to be installed on the server. If you enable the feature and no performance boost happens, please ask your hoster/system administrator to check if the '**pcntl**' extension installed.

**Number of Parallels Processes** - Specify the number of the parallel processes here.

The more parallel processes are set, the faster is the image optimization process, as well as the higher is the server load.

**Process Images per Request** - Enter the number of images you want to be shown instantly, per one request.

You may also optimize images in bulk using a console command (here 4 is the number of threads):

```
bin/magento amasty:optimizer:optimize -j 4</cpde>
```

Moreover, you can specify the particular pattern ( i is the id of the pattern):

```
<code>bin/magento amasty:optimizer:optimize -j 4 -i 2
```

The more images are processed per request, the faster the optimization process is. But keep in mind that your server load is higher as well.

**JPEG Optimization Tool**  
[global]

Jpegoptim 100% quality	▼
Do not Optimize	
Jpegoptim 100% quality	
Jpegoptim 90% quality	
Jpegoptim 80% quality	

**JPEG optimization tool** - set the way to optimize JPEG images:

- Do not Optimize - select this option to forbid optimization;
- jpegoptim 100% quality / jpegoptim 90% quality / jpegoptim 80% quality - choose the quality level you want to get after compression. See the examples of optimized images right below the setting.

**PNG Optimization Tool**  
[global]

Do not Optimize	▼
Do not Optimize	
Optipng	

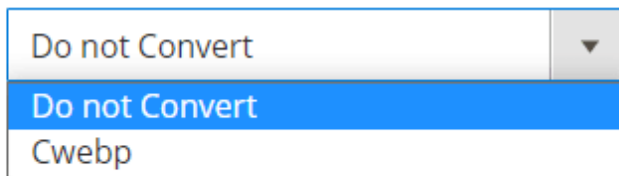

**PNG optimization tool** - select optipng to optimize PNG images.

**GIF Optimization Tool**  
[global]

Do not Optimize	▼
Do not Optimize	
Gifsicle	

**GIF optimization tool** - choose gifsicle to compress GIF files.

### Create Webp Copy [global]

A dropdown menu with a downward arrow icon on the right. The menu is open, showing three options: 'Do not Convert' (top), 'Do not Convert' (middle, highlighted in blue), and 'Cwebp' (bottom). A question mark icon is visible to the right of the dropdown.

When WebP format is used the extension will create a copy for every image in the WebP format. Please make sure that you have enough disc space on your server.

**Create Webp Copy** - choose Cwebp to create a copy for every image in the WebP format.

### Create Images in Smaller Resolutions [global]

A dropdown menu with a downward arrow icon on the right. The menu is open, showing two options: 'Mobile' (top, highlighted in grey) and 'Tablet' (bottom). A question mark icon is visible to the right of the dropdown.

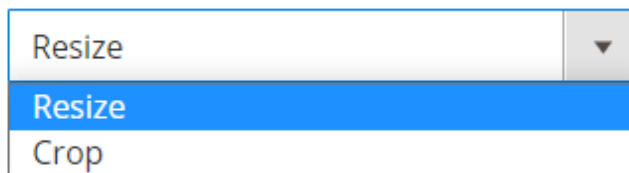

The extension will create a copy of every image in suitable for mobile or tablet size. Please make sure that you have enough disc space on your server.

**Create Images in Smaller Resolutions** - choose the type of copies to be created:

- Mobile - the extension will create copies suitable for mobile devices. All copies will be placed in the automatically created folder - pub/media/amasty/amoptmobile.
- Tablet - all the copies will be created specially for tablets and placed in pub/media/amasty/amopttablet folder.

The extension will create a copy of every image in suitable for mobile or tablet size. Please make sure that you have enough disc space on your server.

### Resize Algorithm [global]

A dropdown menu with a downward arrow icon on the right. The menu is open, showing three options: 'Resize' (top), 'Resize' (middle, highlighted in blue), and 'Crop' (bottom). A question mark icon is visible to the right of the dropdown.

**Resize Algorithm** - select the algorithm according to which the images will be compressed:

- Crop - cuts pictures by size according to the device used, but not proportional to the size of the picture itself. While the height of the image would be the same, in the result the cropped image will look like the part of the original picture.

- **Resize** - compresses the images in proportion to the picture itself according to the size of the field viewed. Simply it will be the same picture, but smaller in pixels.

**Dump Original Images**  
[global]

Yes (Recommended)  
Yes (Recommended)  
No

Original images will be stored in the 'pub/media/amasty/amoptimizer\_dump' folder

**Automatically Optimize Newly Uploaded Images in Catalog and Wysiwyg folders**  
[store view]

Yes (Recommended) ?

All images uploaded to the catalog or Wysiwyg folder will be optimized automatically

**Dump Original Images** - set this option to 'Yes' to store original images in the pub/media/amasty/amoptimizer\_dump folder. It lets to collect all the original files in one place and easily update them in case the settings are changed.

**Automatically Optimize Newly Uploaded Images in Catalog and Wysiwyg folders** - set to 'Yes' to optimize all images uploaded to the catalog or Wysiwyg folder automatically.

All images uploaded to the catalog or Wysiwyg folder will be optimized automatically.

## User Agent

Expand the User Agent tab to adjust settings for image loading according to the customer's browser user agent.

## ⏪ User Agent

**Use User Agent for Loading Images** [store view] Yes ?

**Ignore Images that Contain** [store view]

```
 OR 
```

Example: `` OR `` will be excluded.

**User Agent for Loading Images** - Set this setting to 'Yes' to enable fetching appropriate image sizes based on the user agent data, obtained from the browser.

**Ignore Images that Contain** - In this setting, you can specify certain images to be excluded from the loading based on the user agent info. Such images will be delivered on the users' devices in the original size.

## Lazy Load

### ⏪ Lazy Load

**Enable Lazy Load** [store view] Yes

**Use Lazy Loading Images** [store view] Yes (Recommended)

**Lazy Load Script** [store view]

- jQuery Lazy Script
- jQuery Lazy Script**
- Native JavaScript Lazy Script

Please, try both scripts and choose the one that fits your system best

**Enable Lazy Load** - Set this setting to 'Yes' enable the Lazy Load functionality.

**Use Lazy Loading Images** - set to Yes to make off-screen images load only when a customer scrolls to them. It prevents pages full of images from lagging.

**Lazy Load Script** - you can choose between 2 lazy load scripts: jQuery Lazy Script or Native JS Lazy Script. We recommend trying both of them to choose one that fits your system best.

<b>Preload Images</b> <small>[store view]</small>	Yes (Recommended) 
<b>Desktop Preload Images Number</b> <small>[store view]</small>	5
<b>Tablet Preload Images Number</b> <small>[store view]</small>	5
<b>Mobile Preload Images Number</b> <small>[store view]</small>	2
<b>Ignore Images that Contain</b> <small>[store view]</small>	lazyOwl 

Example: `` OR `` will be excluded.

**Preload Images** - You can decide whether to 'Preload Images' or load them from scratch when they happen on screen. Decide how many images to load by setting Preload Images Number.

**Desktop Preload Images Number** - set the number of images to be pre-loaded on the page from the start. You can also assign a specific number of images for tablet devices with the **Tablet Preload Images Number** and for phones with the **Mobile Preload Images Number** fields.

**Ignore Images That Contain** - specify the images that should not be optimized.

For better compatibility with other extensions, the **img tag** which includes empty src will be ignored.

## Delete Previously Generated WebP & Resized Images

 Delete Previously Generated WebP & Resized Images

Clear Generated Image Folders  
[global]

Clear Generated Image Folders

**Clear Generated Image Folders** - the [Clear Generated Image Folders](#) button deletes the optimized files from the `pub / media / amasty / folder_name` folder.

It is used if the previously selected optimization settings were inconvenient to use and there is a need to re-generate the queue and re-optimize the images.

## Troubleshooting

In this section, you'll find answers to the most frequently asked questions.

[BOOK A LIVE DEMO](#)

[REQUEST CUSTOMIZATION](#)

### How to modify contents of the footer?

In order to modify the contents of the footer, please refer to the file

```
vendor/amasty/theme-frontend-jet-theme/Magento_Theme/layout/default.xml
```

### How to add more content into the Menu?

You can enhance the default Magento Menu functionality with features like image upload, different layouts for the menu display, eye-catching labels, and a hamburger menu.

For this purpose, we recommend you consider the [Mega Menu for Magento 2](#) extension, fully compatible with the Jet Theme.

### CMS Blocks after installation

By default, if you are installing the Jet theme without sample data, all custom CMS blocks by Jet theme will be disabled.

It is made to ensure that no unnecessary blocks will be visible on the frontend.

To enable custom Jet theme blocks, you have to do it manually by enabling each particular block one-by-one.

### Varnish compatibility

To ensure the correct extension work, please check the following configurations.

## Magento is running with Magento\_CSP, no Varnish

Please increase the buffer size in nginx configurations:

```
fastcgi_buffers 16 16k;  
fastcgi_buffer_size 32k;
```

## Magento is running with Varnish or any other proxy

Please, add to *Proxy* section the following:

```
proxy_buffers 16 16k;  
proxy_buffer_size 32k;
```

## The Mixin-Rewrite-Patch & how to install it

The **Mixin-Rewrite-Patch** was created as a suggested sub-component of the Jet Theme module. That's why whenever the Jet Theme is installed through the Composer, the Mixin Patch automatically appears on the bash Terminal screen as a suggestion:

```
amasty/module-lazy-load": ">=1.0.0"  
},  
"suggest": {  
  "amasty/module-ajax-filters-navigation": "Please install the Lite Layered Navigation module by Amasty for free if you want to use it.",  
  "amasty/aminvisiblecaptcha": "Please install the Google Invisible Recaptcha module by Amasty for free if you want to use it.",  
  "amasty/module-thank-you-page": "Please install the Thank You Page module by Amasty for free if you want to use it.",  
  "amasty/product-tabs": "Please install the Product Tabs module by Amasty for free if you want to use it.",  
  "amasty/jet-theme-sample-data": "Install Jet Theme Sample Data to See All Features of Our Theme. After Install Just Run jettheme:sampledatab:dep  
  "amasty/module-mixin-rewrite-patch": "Install mixin rewrite patch if you have a problem with extension on Magento 2.4.2+ version",  
  "amasty/module-jet-theme-mftf-2": "Install module-jet-theme-mftf-2 module to be able to run Jet Theme MFTF tests for Magento 2.3.6 and higher."  
  "amasty/module-jet-theme-mftf-3": "Install module-jet-theme-mftf-3 module to be able to run Jet Theme MFTF tests for Magento 2.4.1 and higher."  
},
```

- To install the patch through the Composer, please use the following command:

```
composer require amasty/module-mixin-rewrite-patch
```

- Afterward please make sure to run:

```
php bin/magento setup:upgrade
```

For more instructions on installing modules/patches through Composer, please refer to [this guide](#).

## How to enable our stylized 'Maintenance Mode' page?

1. If you want to enable stylized for the Jet Theme 'Mainatance Mode' pages, please do the following:

- **if the theme is installed to the 'app/code' folder**, please navigate to 'app/code/Amasty/JetTheme/Setup/Files/errors' and copy the folder 'amasty\_jettheme' to the folder 'errors' ('pub/errors') in the Magento root folder.
- **in case you've installed Jet Theme via composer**, please copy the folder navigate to 'vendor/amasty/jet-theme/Setup/Files/errors' and copy the folder 'amasty\_jettheme' to the folder 'errors' ('pub/errors') in the Magento root folder.

The logo for the Jet theme, featuring the word "jet" in a lowercase, sans-serif font. The letter "j" is black, and the letter "e" is a light green color.

## We've got something new **for you**

We're down for a short time to perform maintenance on site to give you the best possible experience. Check back soon!

**2.** Please follow the instructions below **in case you have the local.xml or local.xml.sample file** before the installation of the Jet Theme on your store.

Please navigate to the *local.xml* file and add the *amasty\_jettheme* into the `<skin>` parameter. In case your file is named *local.xml.sample*, then please rename it into *local.xml* and follow the instructions above.

**3.** Please follow the instructions below **in case you DON'T have the local.xml nor local.xml.sample file** before the installation of the Jet Theme on your store.

If you want to use our stylized 'Maintenance Mode' page for your store, please create file named *local.xml* first, containing the following data:

```
<?xml version="1.0"?>
<config>
  <skin>amasty_jettheme</skin>
  <report>
    <action>print</action>
    <subject>Store Debug Information</subject>
    <email_address></email_address>
    <trash>leave</trash>
    <dir_nesting_level>0</dir_nesting_level>
  </report>
</config>
```

Move the file you've just created [*local.xml*] to the root of the folder '*pub/errors*'.

Then please follow the instructions from the first section of this notice for the case when you already have the *local.xml* file (see it above).

## How to configure the ready-made banner slider widget for the CMS pages?

To create a new banner slider widget, please navigate to **Content → Widgets → Add Widget**.

## Storefront Properties

---

## Catalog Pages

The Catalog Pages on a Jet Theme are equipped with extra options to simplify product browsing.

The screenshot displays the 'What's on the menu?' page in the Jet theme. At the top, there is a navigation bar with 'Default welcome msg!', 'Compare 4', and 'My Account'. Below this is the 'jet' logo and a search bar. A secondary navigation bar includes 'What's on the menu?', 'Cooking', 'Discover WiseMeal', and 'What's new?'. The main heading is 'What's on the menu?'. On the left, there are filter options for 'Category', 'Size', 'Dish type', and 'Price', along with a 'Compare Products' section listing items like 'THE PULP FICTION SET' and 'FRIDAY NIGHT FULL-HO...'. A 'My Wish List' section is also visible, listing items like 'Online course...', 'A dinner for two...', and 'Sicilian Mafia'. The main content area features a grid of six food products, each with an image, title, price, and a 'BE THE FIRST TO REVIEW THIS PRODUCT' prompt. A 'Hide Filters' button is located at the top left of the product grid, and a 'Sort By: Position' dropdown is at the top right. A 'Compare (4)' button is overlaid on the top right product card.

**Hide Filters** - by click, it hides all product filtering options and frees screen space to enlarge product cards.

**Compare** - bright floating 'Compare Products' button always visible and reminds users of products they'd like to compare and buy further.

**Back to Top Button** - a green button with an arrow is visible at all times and enables shoppers to get back to page top in one click.

It's all guns blazing to make your mealtime the best time of the day: with its smell, its taste, its healthiness, and its appearance. Though being nutritional, it remains healthy and perfect to keep you fit. Order it on a special hour and get a discount!	This very dish desires a little pause before being eaten - just look at this perfection! It's all guns blazing to make your mealtime the best time of the day: with its smell, its taste, its healthiness, and its appearance. Though being nutritional, it remains healthy and perfect to keep you fit. Order it on a special hour and get a discount!

Ingredients: raspberries, orange, porridge oats, milk, banana, almond butter, goji berries, chia seeds

Ingredients: tahini, milk of your choice, porridge oats, small bananas, cardamom, toasted sesame seeds

Ingredients: gluten-free porridge oats, milled seeds with flax and chia, almond milk, dairy-free coconut yogurt, toasted flaked almonds, pink grapefruit

Short Description

We know one magical way to start any day full of energy! The secret sauce (well, there's no sauce, that's only a metaphor) is a healthy porridge bowl for breakfast. Packed with nutrients, it's literally designed to fuel your mind and body, making you ready for any challenges the day is preparing for you.
