See the way [CMS Page Builder by MageSolution for Magento 2](#) extension works.

Guide for CMS Page Builder by MageSolution for Magento 2

Create custom pages and content blocks without writing a line of code with Magento CMS Page Builder extension.

- Create and edit CMS, category, and product pages
- Use 30+ building elements to create unique page designs
- Import/export, delete or restore any page version
- Provide mobile-responsive design
- Compatible with Magento 2 themes

Configuration

To install the extension, follow these steps:

STEP 1: Extract Extension Package Right click on the extension package, find and click **Extract files** to unzip your package extension

STEP 2: Upload folders and files in extension package onto Magento root folder

- Open the extracted Builder package.
- Now you can see 3 smaller folders: **app**, **patches** and **pub**.
- Upload folders **app** and **pub** to the folder **app** and **pub** of your Magento root folder, respectively. Please note that, uploading means that you merge content of the original folder with the new content from our extension.
- If you are **using our MGS Builder Theme**, please go to the folder **patches** → **patch_for_mgs_frontend_builder_theme** and once more, upload folder **app** inside it to the folder **app** of your Magento root folder.
- For the extension we recommend from the third party Mageplaza, please go to **patches** → **patch_for_mageplaza_extensions**, upload folder **app** inside it to the folder **app** of your Magento root folder.

STEP 3: Refresh and update system by commands

- Go to your Magento root folder and open a terminal window here.
- Should you type **php bin/magento module:status**, you will see **MGS_Fbuilder** in the list of disabled modules.
- Now type **php bin/magento module:enable MGS_Fbuilder** to enable this extension.
- Type **php bin/magento setup:upgrade** to upgrade the extension to system.
- To make sure everything is up to date: If your Magento version is smaller than 2.1, type **php bin/magento setup:static-content:deploy**. Otherwise, type **php bin/magento setup:static-content:deploy -f**.

- Type **php bin/magento cache:clean** and then **php bin/magento cache:flush** to refresh system.
- Now our CMS Builder is installed successfully.

STEP 4: Active module in backend

- Log in backend with your admin account.
- Go to **MGS → Page Builder Setting → General → Active Front-end Builder.**

8 4

Or input by yourself:

↖ Comma-separated.

SUBMIT

- Or you can input the number by yourself, provide that the sum of 2 columns must equal to 12.

Col 1: col-md-6 + Add New Block

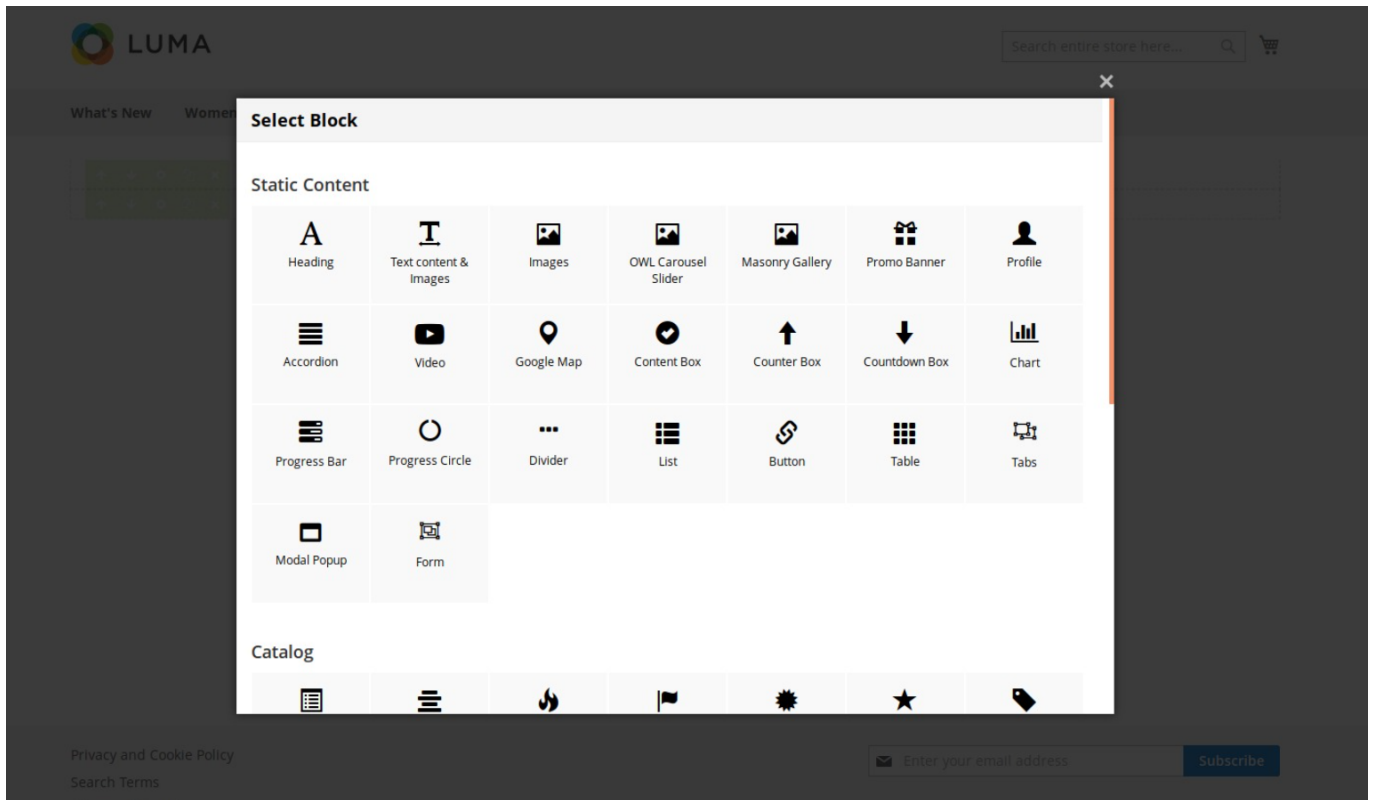

Col 2: col-md-6 + Add New Block

+ Add New Section

- After choosing config column, there will be a more detailed configuration for tablet and mobile resolution for you to set if you need.

Create new block

On CMS page, for any section, you can see **Add New Block button**

Click this button to add new block

You can see 30+ available elements divided into 4 main groups.

Static Content: General contents which are designed for various different purposes.

- Headings
- Text content & Images
- Images
- Owl Carousel Slider
- Masonry Gallery
- Promo Banner
- Profile
- Accordion
- Video
- Google Map
- Content Box
- Counter Box
- Countdown Box
- Chart
- Progress Bar
- Progress Circle
- Divider
- List
- Button
- Table
- Tabs
- Modal Popup
- Form

Catalog: Elements related to category and products.

- Category List
- Category Products
- New Products
- Products by Attribute
- Sale Products
- Top Rate Products
- Daily Deals
- Product Tabs
- Single Product

Social: CMS blocks support popular social networks.

- Facebook Fanbox
- Twitter Timeline
- Instagram
- Instagram Shop

Mageplaza Extensions: Extra extensions from Mageplaza that we recommend you to use.

- Banner Slider
- Blog Post
- Countdown Timer
- Daily Deal
- Brands
- Product Slider

Each block will have different settings, but there are some similar settings on **General** tab.

Heading Block

General	Content Config	Embed Code
Block col (12 to full)	12	
Custom Class		
Block Animation	Choose Animation Effect	Animation Preview
Animation Delay	ms	

- Block col (12 to full): Set width (%) for block on desktop, tablet and mobile screen.
- **Hidden:** Choose to hide the block on any resolution of desktop, tablet of mobile.
- **Custom class:** Add CSS class of block for styling.
- **Block Animation:** Animation effect of the block when page load. Click to choose one in the list.

- **Animation Delay:** Delay of animation effect

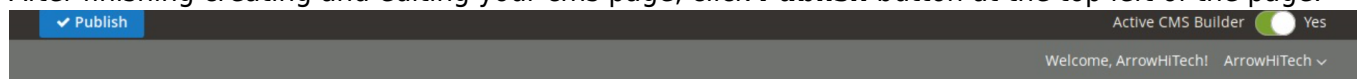

After configuring & saving block, you can see the demonstration of this element, also the group button to edit this block.

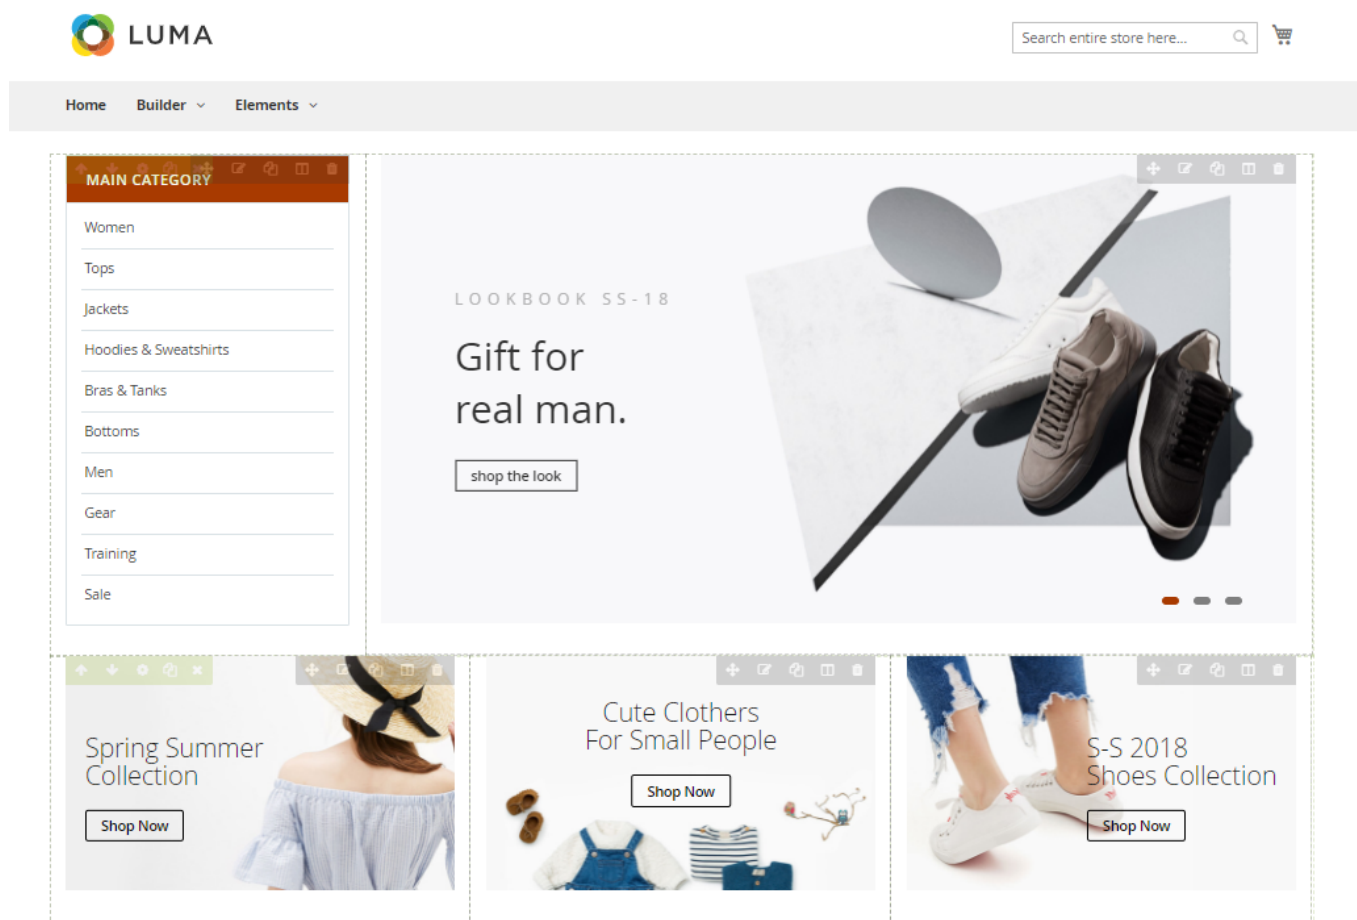

- **Arrows button:** You can drag & drop block to change position. Remember that, the block can't be moved out section or section col.
- **Pencil button:** Edit settings of that block.
- **Copy button:** Duplicate that block
- **Columns button:** Shortcuts to change the Block col
- **Trash button:** Remove block.

Publish a builder page

After finishing creating and editing your cms page, click **Publish** button at the top left of the page.

Wait for the page to reload, now you can see the page is still in editing mode, but it has saved all your data.

If you want to get out of editing mode, switch off **Active Builder** button to see your result.

Product description builder

STEP 1: Enable the Product Description for Builder Account In Backend, go to **Customers → All Customers**. Find the customer you want to enable rule and click its **Edit** button.

Duplicate product description builder template

There are 2 ways to copy product description from a product to another product.

METHOD 1: Edit directly in product detail page (Backend) This way helps to duplicate the Builder's description of a product to a certain product.

- In Backend, go to **Catalog → Products**. Find the product that you want to paste new template and click its Edit button.

Add Product

Filters Default View Columns

Search by keyword

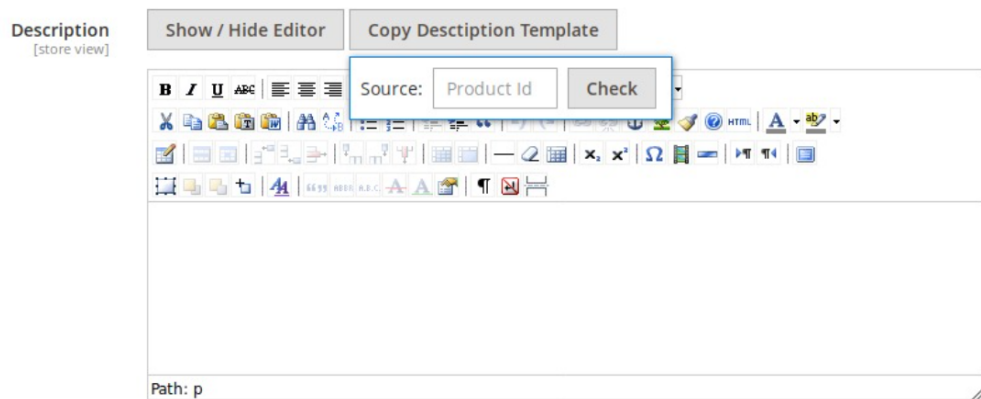

Actions 2046 records found

20 per page 1 of 103

ID	Thumbnail	Name	Type	Attribute Set	SKU	Price	Quantity	Visibility	Status	Websites	Action
1		Joust Duffle Bag	Simple Product	Bag	24-MB01	\$34.00	100.0000	Catalog Search	Enabled	Main Website	Edit
2		Strive Shoulder Pack	Simple Product	Bag	24-MB04	\$32.00	100.0000	Catalog Search	Enabled	Main Website	Edit
3		Crown Summit Backpack	Simple Product	Bag	24-MB03	\$38.00	100.0000	Catalog Search	Enabled	Main Website	Edit

- On Edit Product Page, choose section **Content**.
- Now you can see field **Description** with the **Copy Description Template** button, then click it.

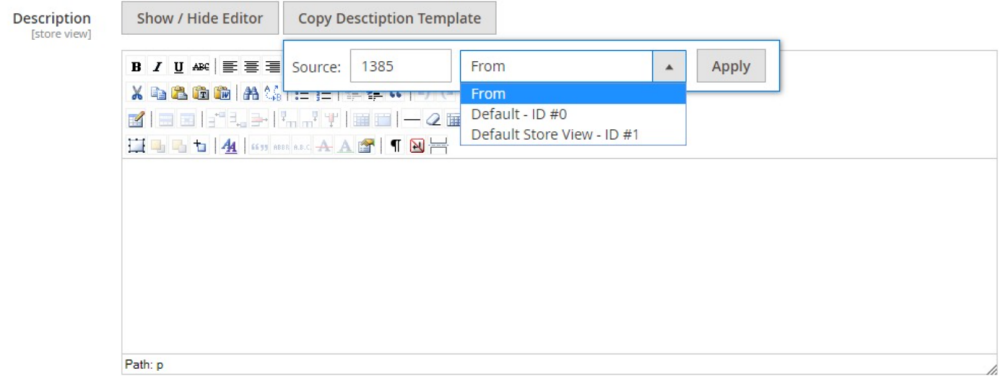

Content

- A box will display and allow you to enter the **Product Id** of the **Source Product**. It means that this is the product of which the description (must be built by Builder) you want to duplicate.

If the Product Id you entered exists, a select list will be shown, allow you to choose from which store view to be duplicated.

Content

- Choose a store view to duplicate. They are distinguished by store view name and store view id.
- Click **Apply** button to require duplication.
- Otherwise, there is nothing changed, you should check the **Product Id** again.
- After you have done, click **Save** button at the top to finish the process.

METHOD 2: Edit directly in the list of products

This method helps to duplicate a Builder's product description to several products.

- In Backend, go to **Catalog → Products**. In the left column, you can see a tick box for each product.

Search by keyword

Actions 2046 records found (3 selected)

<input type="checkbox"/>	ID	Thumbnail	Name	Type	Attribute Set
<input checked="" type="checkbox"/>	1		Joust Duffle Bag	Simple Product	Bag
<input type="checkbox"/>	2		Strive Shoulder Pack	Simple Product	Bag
<input checked="" type="checkbox"/>	3		Crown Summit Backpack	Simple Product	Bag
<input checked="" type="checkbox"/>	4		Wayfarer Messenger Bag	Simple Product	Bag
<input type="checkbox"/>	5		Rival Field Messenger	Simple Product	Bag

- Tick on the product(s) that you want to be **Pasted** a new Builder description.
- Right below you can see the dropdown, click it and find **Copy Description Template** button. Then click it and you can see the pop up box again.

Product by Attribute Block

The Products By Attribute element helps to show products by attribute (Yes/No) with different view options (grid, list, slider, category tabs).

Create (Yes/No) Attribute Product

In backend, go to **STORES → [Attributes] Product**. Click **Add New Attribute** button.

Complete the Basic Properties

The Basic Properties is required for an product attribute.

- Insert the Default Label to describe the attribute.
- In the Catalog Input Type for Store Owner, choose **Yes/No** of the input from a list.
- Choose **Yes** for the Value Required to ask customers to select the options before purchasing.

Complete the Advanced Properties (Optional)

- Insert the Attribute Code that is less than 30 characters and excluded spaces.
- The Scope includes Store View, Website, and Global. You will choose one of three places in your store system where the appearance of attribute is approved.
- Apply the Unique Value if you not want to share it with other products.

Insert the Field Label

- Open the Manage Title section.
- Insert the Title that is shown for the field label. In case of multiple languages supported on your store, insert the translation of the title for each view.

Complete the Storefront Properties

- Choose Yes for the Use in Search to be ready for searching the attribute.
- Allow comparing the product attributes in Product Compare if you choose Yes in the Comparable on Storefront field.
- Choose Yes in the Use for Promo Rule Conditions field to apply the product attribute for the price rules.

To make the attribute visible in catalog page listing, choose Yes in the Visible on Catalog Pages on Storefront field.

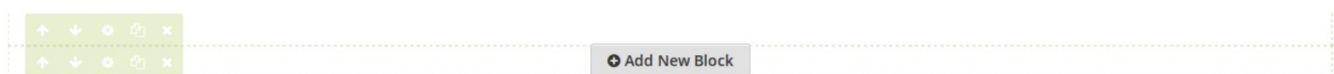

If Product Listing is supported at your store, the attribute can be appeared and used as sort parameter. Configuring that from the Used in Product Listing and Used for Sorting in Product Listing field. Save Attribute to finish all.

Reindex Data

- Login to your server with your SSH account
- Switch to apache user
- Change to magento root directory
- Run command line: `php bin/magento indexer:reindex`
- Run command line: `php bin/magento cache:clean` (if your site enable cache).

Create Product Attribute Builder

- On Builder Editor, click Add New Block button.

- On popup list blocks, click “New Products” item.

If you haven't got any Instagram Shop yet, you can see an announcement like this:

- Please follow our instruction in the box by go to **Admin panel > MGS > Page Builder Setting > Social > Snappt.**
- After that, you will not see Instagram Shop config anymore. Instead, everything you need to do now is to make needed settings in General Config tab.
- Finally, click **Submit** button to save your changes.
