Guide for Stripe Payment for Magento 2

Improve your customers' payment experience. Optimize the conversion rate by providing customers with a convenient and safe payment method.

- All payment needs in one solution
- Safe integration process with 3D Secure protection
- Fluent automatic invoicing function
- Convenient refund options and flexible management
- Fully compliant with the [PSD2 European legislation](#)

The Stripe Payment extension for Magento 2 is fully compliant to the **Revised Directive on Payment Services (PSD2)** that strives to create a secure payment process. It went into full effect on September 14, 2019. Please, re-install or update the extension to a version 3.0.0 to get all benefits of [Strong Customer Authentication](#) and [3D Secure v2](#).

How to Install Amasty Stripe Connector

Since January 2024, Stripe requires plugins to leverage Stripe Apps. All new and existing plugins must use a Stripe App to authenticate users for their service using OAuth 2.0 or a restricted API key.

To create all necessary data for proper operation of App for Payments with Stripe extension, just follow the steps below:

1. Navigate to the Stripe App Marketplace, then click Install the Amasty Stripe for Magento 2;
2. Select the Stripe account where you want to install the app;
3. Review and approve the app permissions, install the app in test mode or live mode, then click Install;
4. After you install the app, store the keys in a safe place where you won't lose them;
5. Use the newly generated publishable key and secret key to finish the Connector configuration. Insert the Publishable key and Secret Key to the Magento 2 Configuration - **Payment Methods - Stripe by Amasty - Publishable key and Secret Key**;

Debug Mode <small>[website]</small>	Enable
Stripe Email Receipts <small>[website]</small>	No
<small>If yes, Stripe will send email receipts for successful payments and refunds but only in Live mode.</small>	

To configure the extension, you'll need your [Stripe account](#).
If you have any troubles with installation, please visit our [troubleshooting checklist](#).

Enable - set to Yes to activate the payment method.

Enable Apple Pay and Google Pay - set to 'Yes' to enable payments via Apple Pay and Google Pay.

Title - specify the custom name of the Stripe payment to display on the checkout page.

New order status - you can select an order status after the payment is captured. There are 2 available order statuses: 'Processing' and 'Pending'.

Define the type of **Payment Action**:

- **Authorize** - to check a card validation without charging until the order is invoiced and approved.
- **Authorize and Capture** - to debit money immediately after order submission.

Partial Invoicing

If a customer drops an order and there are not enough goods to complete it, you can use partial invoicing. In such a case you invoice fewer goods than ordered and meet customer's demand despite the low stock. When the goods become available, you complete the order.

To divide an invoice go to **Sales - Orders** and pick the order you want to invoice partially.

Than pick **Invoice** in the top menu and go to the **Items to Invoice** tab.

New Invoice

Set the number of items for the invoice and press **Update Qty's** button.

Submit the invoice by pressing **Submit Invoice** button at the bottom of the page.

Refunds and Partial refunds support

With the Stripe Payment extension, it is possible to make a full or partial refund of the order paid via Stripe payment. To see the detailed information about the refunds made, go to **Sales → Credit Memos**.

Credit Memos

Admin can refund orders online from the grid.

Also it is possible to create orders and pay for them via Stripe from the admin panel. Go to **Sales → Orders → Create New Order**. After adding the products, choose the payment method.

Show Stripe Payment on the Checkout Page

The customers will see the same formatting as they see on the card. The card type will be detected automatically.
